

# Anjablast®

Anjablast® is a brand of plastic materials offered by almaak International GmbH. While specific details are limited, available information suggests it caters to the blasting media industry.

## **Types:**

Thermoplastic blasting media – Recyclable plastic particles used for various surface treatments.

Media in different sizes and shapes – Designed for different blasting applications and desired surface effects.

## **Properties:**

Public information on Anjablast® properties is scarce. However, considering its potential use as blasting media, some anticipated properties could include:

- High impact resistance – To withstand the blasting process.
- Controlled abrasiveness – Depending on the media type and size for achieving the desired surface finish.
- Recyclability – If made from thermoplastics, contributing to environmental sustainability.

## **Applications:**

Given the limited publicly available information, the most likely application of Anjablast® is as a blasting media for various surface treatment processes in industries like:

- Automotive
- Aerospace
- Manufacturing
