Mitsui & Co. has defined Mitsui’s material issues (“materiality”) for the company to focus on, with the aim of meeting the expectations of a variety of stakeholders and contributing to the creation of a future where the aspirations of the people can be fulfilled, as set out in our corporate mission.

The images shown on the cover mainly represent the Mitsui’s material issues outlined in the Strategic Focus sections of this year’s Report.

Editorial Policy

Through our Sustainability Report 2018 in PDF format, we intend to deliver a message that embodies our unchanging commitment to realizing a sustainable society and engaging in activities for the future. This report is designed to generate new dialogue with our stakeholders so that Mitsui continues to be recognized as an entity that creates value for society.

As an annual report for communicating detailed ESG information, the PDF version of our “Sustainability Report 2018” emphasizes comprehensiveness and continuity in regard to activities undertaken in accordance with Mitsui’s Materiality (“materiality”). At the same time, in “Strategic Focus” and in “Activities for FY 2017”, we have listed clear examples of how we are generating new value that provides solutions to societal issues. We also embrace the UN’s Sustainable Development Goals (SDGs) as a global standard language, and report our various materiality-related activities in the section “Activities for FY 2017 to Contribute to the SDGs”.

On our website, we focus on ensuring convenient browsability and searchability of information related to sustainability, and we have posted our ESG data, as well as a GRI guidelines comparison chart. Our website also provides details of our social contribution activities to complement the information contained in the PDF version of the “Sustainability Report 2018”.

A Cautionary Note on Forward-looking Statements

This Sustainability Report contains statements (including figures) regarding the corporate strategies, objectives and views of future developments of Mitsui & Co., Ltd. (Mitsui”, “Mitsui & Co.”, “Company”) that are forward-looking in nature and are not simply reiterations of historical facts. These statements are presented to inform stakeholders of the views of Mitsui’s management, but should not be relied on solely in making investment and other decisions. You should be aware that a number of important risk factors could lead to outcomes that differ materially from those presented in such forward-looking statements. These include, but are not limited to (i) changes in economic conditions that may lead to unforeseen developments in markets for products handled by Mitsui, (ii) fluctuations in currency exchange rates that may cause unexpected deterioration in the value of transactions, (iii) adverse political developments that may create unavoidable delays in or postponement of transactions and projects, (iv) changes in laws, regulations or policies in any of the countries where Mitsui conducts its operations that may affect Mitsui’s ability to fulfill its commitments, and (v) significant changes in the competitive environment. In the course of its operations, Mitsui adopts measures to control these and other types of risks, but this does not constitute a guarantee that such measures will be effective.

Mitsui & Co. acknowledges companies can only be sustainable if the societies they operate in are sustainable. We want to fulfill our social responsibilities by the sustainable growth of our own company, in order to contribute to the realization of a sustainable society through our business activities.

Mitsui & Co. has been accurately identifying society’s expectations and societal issues through dialogue with various stakeholders, and enhancing our capabilities and functions to meet the expectations of society. Takashi Masuda, the first president of the former Mitsui & Co., stated, “Let not short term gains tempt your mind, seek only enduring prosperity by embracing grand aspirations”. That commitment to stay focused on the future and pursue the sustainability of society and business has remained part of our heritage down to the present day. As a company engaged in business operations on a global scale, we believe that it is our mission to contribute to the creation of a sustainable society through our business activities.

In 2004, we made a declaration to the international community of our commitment to put these concepts into practice by signing and pledging our support for the UN Global Compact, a charter of voluntary principles for businesses and institutions concerning human rights, labor, the environment, and anti-corruption. We strive to implement the provisions of the Global Compact and are committed to stay focused on the future. In 2015, we identified five material issues which are relevant to all aspects of our business activities. Based on a medium- and long-term perspective, we assess potential risks and opportunities that arise from the influences brought by those identified five material issues. In 2017, we established the Sustainability Committee under the Corporate Management Committee with the aim of ensuring that these ideas are deeply reflected in the activities of Mitsui & Co. For the fiscal year ended March 2018, we held discussions mainly on climate change, covering a wide range of topics including the direction of Mitsui & Co.’s future initiatives and responses, risk management, and disclosure policies, and reported the results to the Corporate Management Committee and the Board of Directors.

We will continue to plan, formulate, and make proposals for advancing management more focused on the sustainability of society and Mitsui & Co.

Today, problems with the potential to threaten the sustainability of both the global environment and society are occurring on a global scale, causing heightened unpredictability and uncertainty in every field of activity. We are now in an era in which we must use various options to search for paths to the future. As manifested in the adoption of the Sustainable Development Goals (SDGs) and the Paris Agreement by the United Nations, corporations are expected to enhance corporate value and maintain a strong focus on long-term perspectives and social sustainability. Because of these changes, we believe that we need to sharpen the sensitivity of the antenna that we have developed, in order to fulfill our corporate mission of contributing to the creation of a sustainable society through our business activities.

Mitsui & Co. will contribute, through its wide-ranging global business activities, to solutions to global issues, such as economic and social development in various countries and regions and climate change. We will work to promote a better understanding of our business activities by informing the world about our strengths and vision, so that we can earn the trust of all our stakeholders, including our customers, business partners, and governments and local communities in the countries where we do business, as well as our investors.

While we continue to strive not only to fulfill our social responsibilities, we will drive our business with an increased focus on ESG (environmental, social and governance) aspects in line with our identified Materiality, and embody our corporate slogan, “360° business innovation.” By doing so, we will create outstanding business that benefits Japan and the world and enhances our corporate value, and contribute to the realization of a sustainable future where the aspirations of people can be fulfilled.

Satoshi Tanaka
Representative Director, Executive Vice President

Sustainability Report 2018
Message from the Chairperson of the Sustainability Committee

Mitsui & Co. will contribute to a better, more sustainable future where the aspirations of people can be fulfilled
Sustainability at Mitsui & Co.

**Value Creation in Pursuit of Social Sustainability**

**Mitsui & Co’s Value Creation**

Companies can only be sustainable if the societies they operate in are sustainable, and unsustainable companies cannot fulfill their social responsibilities. At Mitsui & Co., we try to anticipate changes in society with each era. We reflect on how we should advance our capabilities and ceaselessly challenge ourselves to express our potential in ways that bring the most benefit to society.

We believe that we must continually improve the way we engage with environmental and societal issues, listen closely to our stakeholders, and ensure that we have a clear understanding of key concerns, issues, and expectations. It is then our responsibility to contribute to addressing issues and meeting expectations in the most effective way possible.

We continue to ensure that all of our employees share our management philosophy, as expressed in our Mission, Vision, and Values, and to strengthen our robust management platform, including our governance and risk management systems. At the same time, working alongside our stakeholders, our aim is to pursue business in a manner expressed in our “360° business innovation.” slogan.

This slogan indicates that one of our greatest strengths is our ability to connect ideas, information, customers, and business partners to create new value around the world so as to strive to contribute to the creation of a future where the aspirations of the people can be fulfilled. This is what Mitsui is expected to do and how Mitsui strives to create new value in pursuit of social sustainability.

* 360° business innovation is our corporate slogan. It expresses our message of connecting ideas, information, customers, partners and business across the planet to create new possibilities.
Corporate Mission Vision Values

In 2004 Mitsui systematically and clearly set forth in written form the implicit values we share and issued our Mission, Vision and Values (MVV). We believe that sharing this management philosophy is even more important than ever as we work to create true value around the world through our global activities.

Mission, Vision and Values (MVV)

Mission
Strive to contribute to the creation of a future where the aspirations of the people can be fulfilled.

Vision
Aim to become a global business enabler that can meet the needs of our customers throughout the world.

Values
- Build trust with fairness and humility.
- Aspire to set high standards and to contribute to society.
- Embrace the challenge of continuous innovation.
- Foster a culture of open-mindedness.
- Strive to develop others and oneself to achieve full potential.

Basic CSR Policy

1. We will conduct our business activities with honesty and integrity, make prudent efforts to understand the culture, traditions, and customs of countries and regions around the world, and reinforce the importance of CSR with each of our employees. Based on our conscientious management, we will strive to enhance corporate value to stakeholders and to produce value to society.
2. We will make every effort to actively contribute to the achievement of a sustainable society through the promotion of sustainable development as well as maintaining a strong awareness of the importance of preserving the global environment. We will also emphasize the importance of interactive communication with stakeholders to understand their concerns and fulfill our accountability for our CSR activities.
3. We recognize the significance and importance of the human rights contained in the general principles of international standards such as the Universal Declaration of Human Rights. Throughout all occasions of our entire business activities, we will give due consideration to basic labor rights.
4. As a global company with operations throughout the world, we will support Mitsui & Co.’s group companies in the practice and implementation of our CSR policies, and will sincerely seek our business counterparts’ understanding and cooperation to support this initiative.

Mitsui & Co.’s Core Values

The former Mitsui & Co.* which was established in 1876, was disbanded as part of the dissolution of Japan’s zaibatsu (industrial conglomerates) shortly after the end of World War II. The current Mitsui was founded by employees of the former Mitsui that shared the values of the original company: “Challenge and Innovation”, “Open-Mindedness”, and “Focus on Human Resources”. The Mitsui of today continues to contribute to the creation of new value for society.

The way we work and the way we think are still very much based on the values espoused by Takashi Masuda, the first president of the former Mitsui, and are reflected in our stance toward our work. The principles of Mitsui’s approach to sustainability as social responsibility have always reflected its founder’s values, a way of thinking unchanged to this day.

* The current Mitsui was established through mergers of the various new companies that had been established after the disbandment of the former Mitsui by the order of GHQ, so legally speaking, there has been no continuation between the former Mitsui and the current Mitsui.

“Let not short term gains tempt your mind, seek only enduring prosperity by embracing grand aspirations”.
“Mitsui has a pool of very talented individuals. This is Mitsui’s most important asset”
Takashi Masuda, the first president of the former Mitsui
Mitsui & Co.’s Stakeholders

Mitsui puts emphasis on interacting with and having dialogue with society. For this reason, we closely assess the effects of its diverse and global business activities on society, identifies and acknowledges stakeholders of particular interest, and strives to have interactive communication with them in all areas of its business operations.

In particular, we are committed to the development of relationships based on mutual trust with a diverse range of stakeholders, including local communities, NPOs & NGOs, government bodies, business associates & consumers, shareholders & investors, and employees, through proactive information disclosures and continual communication with our stakeholders.

Through interactive communication with its stakeholders, each of Mitsui’s employees and officers is endeavoring to acquire a firm understanding of what society expects from and requires of Mitsui. Based on this understanding, we strive to respond to changes in market environments, and constantly evolve to create new value through our business activities by exercising our unique capabilities, and thereby contribute to the realization of a sustainable society.

Initiatives in the Fiscal Year Ended March 2018

Dialogue with Partners (Supplier On-site Surveys)
Mitsui conducts supplier on-site surveys each year under its Supply Chain CSR Policy. Any issues identified through on-site surveys and discussions are used to improve business operations.

In the fiscal year ended March 2018, we conducted on-site surveys at the plants of our supplier of oleochemical product in Malaysia, and palm plantation which is the supplier of the company. The company properly manage their operations in accordance with high standards in terms of labor practices and safety management, and through the introduction of a new system for quality management, they quickly conduct quality analysis and to enhance safety. The external expert who accompanied us advised on the importance of engaging in furthering initiatives for achieving a sustainable supply chain, including providing support for small-scale farmers.

Dialogue with Shareholders and Investors
A business corporation cannot find solutions to complex and multi-layered societal and environmental issues solely through its own efforts alone. There are NPOs and NGOs that engage in specialized frontline efforts to solve problems, and cooperation with these organizations is essential. Mitsui holds dialogues with these organizations to gain an understanding of their perceptions of issues and expectations toward the business activities of corporations, and considers those points in deliberations about changes to our activities, or other actions that may be required.

Dialogue with NPOs and NGOs
Throughout the fiscal year, we engaged in dialogue with NPOs and NGOs, formed a program designed to raise quality of life in local communities.

In November 2017, a “Sustainable Palm Oil Conference” organized by JaSPOC (Japan Sustainable Palm Oil Conference) was held in Tokyo at the United Nations University with the theme “Procurement of Palm Oil aiming for 2020.” As this conference is a newly established with the aim of achieving a sustainable palm oil market, and have been undertaking forest conservation initiatives in collaboration with environmental NGOs, with the aim of halting forest destruction, which is a cause of global warming, through the formation of a program designed to raise quality of life in local communities.

In fiscal year March 2018, we held an Investor Day for the first time, as an event to explain company-wide, mid- and long-term strategies, taking the opportunity of the announcement of the Medium-term Management Plan. Also, in response to the increasing demands on companies to disclose their business strategies and future growth scenarios, including non-financial information about ESG and other areas, we exchanged views about the initiatives and disclosures required for companies, with the market through detailed dialogue from the perspective of ESG. We continue our efforts to maintain high standards of accuracy, timeliness, and quality in our disclosure of information, and to foster good communication with the investment community.

Dialogue with Academics and Other External Experts
Mitsui actively engages in dialogue with academic experts involved in sustainability research. In the fiscal year ended March 2018, we sought opinions about the disclosure of our initiatives, especially in relation to the United Nations Sustainable Development Goals (SDGs), and obtained advice about the relevance of our identified Materiality to the SDGs, as well. We also received comments specifically about the need for the continual updating of our materiality in order to reflect opinions from a more diverse range of stakeholders. We are using this input to improve the disclosure of sustainability information.
We contribute to sustainable development through our wide-ranging business activities and societal contribution activities in countries and regions throughout the world. We also aim to achieve harmonious coexistence with local communities through contributions in such areas as local industry development, creation of employment opportunities, and the improvement of educational environments.

The United Nations Global Compact is a set of voluntary action principles for corporations proposed by former UN Secretary-General Kofi Annan at the World Economic Forum held in Davos, Switzerland in January 1999. He proposed a means to harness the creative powers of the private sector to fulfill the wishes of underprivileged people and meet the needs of future generations. It is neither a regulatory means nor a legally binding code of conduct, but rather a strategic policy initiative that encourages corporations to come together as global citizens to solve the various problems that could arise as a result of economic globalization. Participating corporations are asked to support and put into practice ten universally-accepted principles in the areas of human rights, labor, environment, and anti-corruption. As of May 2018, over 13,000 corporations, labor unions, and civil society organizations from around the world are participating in the UN Global Compact.

In October 2004 Mitsui & Co. signed and pledged its support for the UN Global Compact. Mitsui has been participating as a member of the Global Compact Network Japan and is complying with the principles as part of its own corporate guidelines. Currently Mitsui conducts a companywide survey every other year in order to check compliance with the UN Global Compact principles, and is working to comply with and practice the principles on a global group basis.

### Ten Principles of the UN Global Compact

#### Human Rights
1. Businesses should support and respect the protection of internationally proclaimed human rights; and
2. make sure that they are not complicit in human rights abuses.

#### Environment
7. Businesses should support a precautionary approach to environmental challenges; 
8. undertake initiatives to promote greater environmental responsibility; and
9. encourage the development and diffusion of environmentally friendly technologies.

#### Labor
3. Businesses should uphold the freedom of association and effective recognition of the right to collective bargaining; and
4. make sure that they are not complicit in child labor; 
5. the effective abolition of child labor; and
6. the elimination of discrimination in respect of employment and occupation.

#### Anti-corruption
10. Businesses should work against corruption in all its forms, including extortion and bribery.
Sustainability at Mitsui & Co.

Mitsui SASUGAKU: Hosting of a sustainability workshop for increasing awareness of the SDGs – “Risks and Opportunities from the Future”

In December 2017, we hosted a workshop using the workshop-style methods used in “SASUGAKU” entitled “Mitsui SASUGAKU - Risks and Opportunities from the Future”, with the aim of increasing understanding of the SDGs.

There were 35 participants on the day of the workshop, mostly Sustainability Promotion Officers. Sustainability Promotion Officers assigned to each organizational unit are responsible for supporting the implementation of sustainability management through our business activities. The participants used the “SASUGAKU Compass for Creating the Future” (“the Compass”) and “Future Chronology”, which are the main teaching materials of the SASUGAKU. In 2030, society will be facing many issues with numerous and complex causes, and to start with the participants recognized that these societal issues will affect us all directly. They then split into groups to share their thoughts and carry out group activities. By the end of the workshop, the participants had gained a real sense of how their own ideas can become connected to the approaches taken to Mitsui & Co’s Materiality and the SDGs.

We will continue to work together with the Sustainability Promotion Officers to deepen our understanding of the SDGs, and we will engage in initiatives leading to solving many of the challenges that society will face through our business activities.

SASUGAKU (meaning “Sustainability Learning”) was designed with the goal of developing recognition among people that the many challenges facing the society in which we live are issues that affect all of us directly, and of finding the best ways of overcoming these challenges. Since 2014, Mitsui has offered new learning opportunities for upper-grade elementary school children, who will create the future, in the form of the Mitsui SASUGAKU Academy. In recognition of these activities, we received, in 2016, the Japan Association for Human and Environmental Symbiosis Award for Environmental Activities and, in 2017, the Judging Panel’s Incentive Prize in the Corporate Youth Experience Promotion Awards of the Ministry of Education, Culture, Sports, Science and Technology.

World Economic Forum

The World Economic Forum is an independent international organization that engages leaders from the worlds of business, politics, academia, and other sectors of society to shape global, regional, and industry agendas in the spirit of global citizenship, through cooperation between the public and private sectors, for the improvement of the world situation.

As a partner company, Mitsui attends the annual meeting of the World Economic Forum held in Davos, Switzerland every January, as well as attending regional meetings.

Japan Foreign Trade Council, Inc.: Global Environment Committee, CSR Study Committee

As a member of the Global Environment Committee of the Japan Foreign Trade Council, Mitsui monitors energy use for all trading companies (shosha) and promotes reduce/reuse/recycle (“3R”) activities. We also gather information about new energy technology through our business activities, and contribute to the development of the trading company sector’s voluntary action plan for environmental initiatives for a low-carbon, recycling-oriented society.

Mitsui is also a member of the Japan Foreign Trade Council’s CSR Study Committee, which studies CSR-related issues and conducts surveys and research about trends in Japan and overseas. We work with other members on such activities as the formulation and review of the Supply Chain CSR Action Guidelines based on the principles of the Shosha’s Corporate Code of Conduct (code of conduct for trading companies). In the fiscal year ended March 2018, we joined the Working Group for the upgrading of said Code of Conduct and engaged in its revision.

Japan Business Federation (Keidanren): Committee on Corporate Behavior & Social Responsibility, Committee on Gender Diversity, Committee on Environment and Safety, Committee on Nature Conservation

Mitsui is a member of Keidanren’s Committee on Corporate Behavior & Social Responsibility, which works to ensure ethical behavior by businesses, promote CSR, and expand and encourage social contribution activities by businesses and businesspeople, including support for disaster recovery efforts. We are also a member company of the Committee on Gender Diversity, which implements the Action Plan on Women’s Active Participation in the Workforce, urges employers to promote women to managerial and executive positions, and promotes initiatives for realizing a society in which a diverse range of human resources, including LGBT people, are able to take on active roles.

In addition, we belong to the Committee on Environment and Safety, which works toward the implementation of environmental policies designed to be compatible with economic activities, including the promotion of voluntary action plans and countermeasures relating to global warming, waste, recycling, and environmental risks. Moreover, since 2012 a Mitsui employee has been seconded to Keidanren’s Committee on Nature Conservation, which works to conserve biodiversity and protect the natural environment. In the fiscal year ended March 2018, we joined the task force for reviewing the Keidanren Charter of Corporate Behavior and engaged in activities directed towards realizing a sustainable society (the aim of said Keidanren Committee) through participation in the reviewing process.
Council for Better Corporate Citizenship (CBCC)

As a member of the Council for Better Corporate Citizenship (CBCC), which was established by Keidanren, Mitsui engages in activities that help Japanese companies to be accepted as good corporate citizens by the countries and regions in which they conduct business, in accordance with the purpose of CBCC. Mitsui works to ascertain the views of various stakeholders, including overseas CSR-related organizations, by participating in presentations, seminars and business dialogue on CSR-related themes.

Japan Forum of Business and Society (JFBS)

As a GOLD member of the Japan Forum of Business and Society (JFBS), Mitsui is engaged in connecting theory and practice in the business world concerning issues relating to sustainable growth, which affect the relationship between businesses and society, through wide-ranging collaboration and cooperation with academia, industry, government, labor, and NPOs/NGOs. We are engaged in academic research and discussions on sustainability management, corporate governance, environmental management, social contribution, labor, human rights and other aspects, as well as in human resources development that embodies sustainability education.

Japan Business and Biodiversity Partnership

The Japan Business and Biodiversity Partnership was established through a collaborative initiative by the Keidanren, the Japan Chamber of Commerce and Industry, and Keizai Doyukai (Japan Association of Corporate Executives) with the aim of promoting private-sector initiatives on biodiversity. As a member company, Mitsui promotes biodiversity conservation initiatives in partnership with NPOs, NGOs, research institutions, and other related entities in Japan and overseas. Furthermore, Mitsui contributes to conservation of biodiversity in its supply chains by promoting a sound resource-cycle policy in its business management focusing on the lifecycle of products and services.

Forest Stewardship Council® (FSC®)

The Forest Stewardship Council® (FSC®) is an international nonprofit organization with members including environmental NGOs, private business corporations, and organizations representing indigenous communities. It promotes the responsible management and use of the world’s forests in consideration of environmental and societal aspects by certifying forests and the processes involved in the distribution and processing of lumber taken from those forests.

Mitsui has obtained FSC® forest management (FM) certification at all 74 of its forests, which total approximately 44,000 hectares, while Mitsui Bussan Forest Co., Ltd., a Mitsui subsidiary, has obtained Chain of Custody (CoC) certification for the processing and distribution of cut lumber. Mitsui is the biggest supplier of Japanese-grown lumber with FSC® certification. As a member of FSC Japan’s Board of Directors, Mitsui is helping to promote the FSC® in Japan and to study and prepare principles, standards, and risk assessments for Japan.

Roundtable on Sustainable Palm Oil (RSPO)

The Roundtable on Sustainable Palm Oil (RSPO) is a nonprofit organization established to promote the sustainable production and utilization of palm oil through the conservation of tropical rain forests and biodiversity. Mitsui supports the RSPO’s philosophy of contributing to sustainability through industry, and has been collaborating on various business-based initiatives since joining the organization in 2008.
Mitsui & Co.'s Materiality

Mitsui & Co. prioritizes and focuses on sustainability in its corporate management. We have identified Mitsui’s material issues (“materiality”) for the company to focus on, with the aim of meeting the expectations of a variety of stakeholders and contributing to the creation of a future where the aspirations of the people can be fulfilled, as set out in our corporate mission.

We explain the themes set out under Mitsui & Co.’s Materiality, and how we have linked these to the SDGs to focus our efforts on tackling the SDGs’ 17 goals and 169 targets. We also introduce some of the specific activities we implemented during the fiscal year ended March 2018.

Detailed reports on each of the themes addressed in “Mitsui & Co.’s Materiality” can be found in P.19–90.
Identification and Review for Materiality

Identification Processes on Materiality

In March 2015, Mitsui & Co. defined five Material Issues for the company as the important management indices. In the specifying process, we identified various issues with respect to international frameworks, such as ISO 26000, and GRI Guidelines, and narrowed down the materiality for stakeholders based on our dialogue with business associates, NPOs & NGOs, experts, and other stakeholders.

To ensure compatibility between the identified materiality and key corporate priority measures and strategies for each business domain, we carried out deliberations at the CSR Promotion Officer’s meeting (current Sustainability Promotion Officer’s meeting) and CSR Promotion Committee (current Sustainability Committee) and asked external experts to verify the adequacy, in order to define the key priority issues. Then, the identified material issues were approved by the Corporate Management Committee and the Board of Directors and were shared with all officers and employees.

At the same time, as a management approach in line with the GRI Sustainability Reporting Standards, we define specific themes to work on each material issue, and clearly indicate relevant policies and set targets accordingly.

Through this approach, we strive to implement measures to address issues by identifying material aspects and boundaries as indicated by GRI.

Review Process on Materiality

Each aspect of the materiality and the relevant themes to be addressed will be periodically reviewed in order to meet the changing needs and expectations of society and to reflect them in our Medium-term Management Plan and take into account those changes impacting the economy, environment, and society in our sustainable management.

As the basis for the periodical review, we have adopted the international initiatives that are stipulated in the diagram below:

<table>
<thead>
<tr>
<th>Stakeholders identified for communication</th>
<th>International initiatives taken into account (basic frameworks)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Shareholders, investors, business associates, consumers, government bodies, NPOs/NGOs, local communities, employees, etc.</td>
<td>UN Global Compact, GRI Guidelines for Multinational Enterprises, Universal Declaration of Human Rights, ILO Declaration on Fundamental Principles and Rights at Work, Guiding Principles on Business and Human Rights, ISO26000, GRI G4 Sustainability Reporting Guidelines</td>
</tr>
</tbody>
</table>

Value creation and solution for societal issues through Mitsui & Co.’s entire business activities, which include environmental & social contribution activities.
Mitsui & Co.’s Approach

We rigorously comply with environment-related laws, regulations, and treaties. We strive to prevent environmental pollution and curb greenhouse gas emissions, to adapt to climate change, and to maintain biodiversity. We are alert to environmental impacts and work to mitigate those impacts. We use our integrated strengths and work in cooperation with our partners to achieve rational, long-term industrial solutions to environmental problems. We systematically provide grants, through the Mitsui & Co. Environment Fund, for university research and NPO/NGO activities that contribute to the solution of environmental problems, efficient resource utilization, protection of ecosystems, and harmonious coexistence between ecosystems and human beings.

- Global warming, climate change
- Loss of biodiversity
- Energy and water shortage
- Environmental pollution

For further information on our responding to climate Change through our business, please refer to the link below.

Risks

- Risks arising from policies and legal systems related to the transition to a low-carbon economy, and risks to supply and demand in existing business resulting from the creation of new technologies and new markets; risks to companies’ operations from cyclones and hurricanes caused by the physical effects of climate change, and risks to production volumes for agriculture, forestry, and fishery products from abnormal weather (high temperatures/drought); and higher environmental costs resulting from ecosystem destruction, degradation, etc., as a consequence of business activities.

Opportunities

- Expansion of environment-related markets due to increased environmental awareness and the tightening of regulations; demand for high-efficiency power plants; creation of new business models through the circular economy and sharing; expansion of business domains as a result of energy diversification, such as sustainable energy; and handling of products and services that contribute to a low-carbon society by controlling energy consumption and greenhouse gas emissions.
Mitsui & Co.’s Approach

Recognition of societal issues

The establishment of supply sources for resources, such as energy, metals, water, food resources, chemicals, and materials, as well as the stable supply of these resources and materials have become important social priorities because of demand expansion driven by population growth and the desire for a better standard of living, especially in emerging countries.

- Population increase and expansion of demand for resources and materials
- Expanded responsibility for environmental and social aspects in supply chains

Main risks and opportunities

- **Risks**
  Suspension of business operations and instability in the supply of energy and food resources because of climate change and population growth.
- **Opportunities**
  Sustainable resources development and food supply, reinforced competitiveness through consideration for the environment, labor and social aspects, and measures to ensure traceability across entire supply chains.

Mitsui’s Approach

We work with suppliers, users, and business partners in Japan and overseas to engage in resource development, production, product distribution, processing, and recycling initiatives in various parts of the world. We also strive to build optimized supply chains through the improvement of infrastructure and logistics, including the development of railroad transportation and port facilities. At the same time, we work to identify sustainability priorities and achieve comprehensive improvements and solutions across the supply chain as a whole.
# Mitsui & Co.’s Approach

## Recognition of societal issues

We recognize the importance of contributing to the lives of people in the countries and regions where we do business, with respect to the enhancement of quality of life, development of local industries, development of the educational environment, and the creation of employment opportunities.

- Ageing infrastructure in developed nations
- Infrastructure development in emerging countries
- Food safety and reliability
- Maintenance of health, securing of medical, nursing-care, and welfare services

## Main risks and opportunities

### Risks

Loss of credibility due to safety or health problems affecting infrastructure users or final consumers of products and services.

### Opportunities

Expansion of markets through infrastructure development, measures to ensure food safety, and “healthcare ecosystem” development aimed at enhancing the quality of life in emerging countries, etc., and creation of markets by promoting ICT-based business to build urban social infrastructure in response to the move toward developing smart cities.

## Mitsui’s Approach

Through our business activities, we engage in developing the infrastructure needed for growth and prosperity in countries and regions all around the world, including electric power, transportation and communications. We also strive to improve basic services, such as healthcare and care for the aged, to create new value, envisaging a future in the next-generation business domains that embody innovation, and to develop local industries and create employment.

We also contribute to developing human resources with global perspectives and improving the educational environment through the hosting of endowed lecture programs at universities and through a variety of education funds and scholarships.

Sustainability Report 2018

Mitsui & Co.’s Materiality
Mitsui & Co.'s Approach

Recognition of societal issues

As a company with a diverse range of value chains in many countries and regions, we regard respect for human rights, including those of business associates and consumers, based on international standards as the foundation of sustainability management.

- Greater responsibility for human rights in the supply chain (labor practices, impact on local residents, etc.)
- Consideration for indigenous people in conjunction with resources development
- Illicit use of personal information that may be obtained via the increasingly widespread use of Internet and digital communications technology

Main risks and opportunities

- **Risks**
  Disputes or protests concerning human rights issues in every spectrum of business that could hinder the start-up or continuation of business, and leakage of information held by the company that could be used to identify individuals
- **Opportunities**
  Strengthening of the ability to ensure stable supply through consideration for human rights across all supply chains

Mitsui's Approach

Being aware of our role as a member of the international community, we work to understand the culture, traditions, and practices of each country and region in which we operate. We are working to ensure there is no discrimination based on race, belief, gender, social status, religion, nationality, age, or mental or physical abilities, and take action to rectify labor practices that violate human rights. We are committed to the eradication of forced labor and child labor. We do not condone any form of child labor and are committed to following minimum working age laws wherever we operate. We are committed to complying with laws concerning slavery and human trafficking wherever we operate. Acknowledging that our responsibility extends beyond legal compliance within our own operations, we also work to ensure that human rights are respected in the supply chain. We are also contributing to the development of a society in which human rights are respected, by preventing the illicit use of personal information through implementation of countermeasures against increasingly sophisticated and devious cyber attacks and the resulting risk of the leaking of information that could be used to identify individuals.

Recognition of societal issues

Corporate governance is the foundation for our efforts to make a continuing contribution to society through our business activities and maintain our status as a company trusted by society. We regard the enhancement of corporate governance and internal controls as key priorities, in addition to the fostering of human resources who support these efforts and constitute the foundation for all of our company’s business activities.

- Malfunctioning of corporate governance and internal controls
- Stagnation in productivity due to cookie-cutter working styles
- Diversification and globalization of human resources

Main risks and opportunities

- Risks
  Impact due to lack of appropriate decision making from a broad perspective, corruption in business of high public significance in emerging countries and other markets, and suspension of business operations due to information security problems.

- Opportunities
  Contributions to labor productivity improvement via innovation in working styles, promotion of fair and equitable treatment and meaningful human resources training, enhancement of individual competitiveness through promotion of diversity management, and creation of new business opportunities focusing on the solution of societal issues through heightened employee sustainability awareness.

In order to maintain our status as a company trusted by society, we work to maintain effective governance, ensure fair business practices, and prevent corruption. We review working styles from the perspectives of productivity and efficiency, while creating an environment in which diverse individuals can reach their full potential. In this way, we will enhance our corporate competitiveness. Moreover, to strengthen the driving force of Mitsui & Co., we will further demonstrate our integrated strengths and our ability to connect at an even greater magnitude, and develop human resources capable of taking responsibility for global group management equipped with the capacity to create businesses that would make a meaningful contribution to the society.

A land-based aquaculture system that can be developed successfully as a business without harming the environment

Consumption of salmon* has been growing steadily, and in global terms salmon is the third most widely farmed species for sea aquaculture. However, almost 90% of global production takes place in just two countries—Norway and Chile—and these two countries already have extensive fish-farms along their coasts, with little room for further expansion.

This situation has encouraged several companies in other countries to experiment with land-based aquaculture. In most cases, however, these land-based facilities discharge a quantity of wastewater equivalent to around 30% of the capacity of the fish-tanks every day, making it necessary for them to add an equivalent amount of seawater or underground water to the tanks; they also suffer from high electric power consumption because of the need to adjust the water temperature.

By contrast, FRD Japan farms fish using advanced bacteria-based filtration technology to cycle artificial seawater (made from ordinary mains water) through a 100% closed containment environment; this is the world’s first land-based aquaculture system of its kind. The negative load on the environment is significantly reduced, and because the system does not use natural seawater or underground water, the cost of electric power required for temperature regulation is also substantially reduced. Furthermore, if land-based fish-farms are established near the markets where the fish will be consumed, then the fish transportation costs will be kept low compared with importing salmon from sea aquaculture facilities in other countries, which in turn will reduce the negative environmental load from transportation.

In launching this business, our goal was to become the first team in the world to establish a commercially-viable land-based salmon-farming business, creating a sustainable business that will also contribute to environmental conservation.

*Large-sized rainbow trout that are farmed in sea aquaculture facilities. Making it possible for the salmon that people consume to be farmed locally

A pilot facility began operation in Kisarazu City in Chiba Prefecture, Japan in 2018; the goal is to ramp up to full-scale commercial production, with annual production volume of 1,500 tons of fish, by 2020.

Protection of the Global Environment

Aiming to develop a sustainable aquaculture business that does not pollute the oceans, and is not dependent on the oceans

Fish are disappearing from the world’s oceans. The main reasons for this situation include the overfishing that has accompanied rising demand for marine products, and changes in ocean temperature and ocean currents, etc. The Conference of the Parties (COP) to the Convention on Biological Diversity (CBD) has set a goal of minimizing the pressure that human activity places on marine ecosystems. At this time when there is growing interest in methods that can realize sustainable aquaculture, while safeguarding marine organisms and minimizing the load on the environment, Mitsui & Co. has decided that it is vitally important to commercialize land-based aquaculture, a production method that is not dependent on the oceans, and has invested in FRD Japan, Co., which possesses some of the most advanced technology in the world in this field.

My own personal goal is to contribute to the transformation of aquaculture into a sustainable business model, and to help create a world in which people can continue to enjoy easy access to delicious, safe fish that they can eat with real peace of mind.

Once we have achieved successful operation of a full-scale commercial facility in Kisarazu City, we aim to establish several large-scale land-based fish-farms in Japan and in other countries in the Asia region. With growing awareness in the retail sector of the need to prevent over-fishing and pollution of the oceans, and with more and more companies making an effort to procure sustainable marine products, our goal is to make it possible for the salmon that people consume in any given region to be farmed locally, so that this local sourcing model can become the norm in the future.

<tr>
<td>Conserve and sustainably use the oceans, seas and marine resources for sustainable development (14.7)</td>
<td></td>
<td>(14.7)</td>
</tr>
</tbody>
</table>

### Activities for FY 2017

**Energy**
- Achievement of ASC certification for two salmon farming sites through investment and participation in Salmons Multiexport S.A. (Chile). (12.2, 14.7)
- Maintenance of FSC® and SGC® certifications for 74 forests owned by Mitsui across Japan (approx. 44,000 ha) and continuation of responsible management and handling of forest resources. (12.2)
- Achievement of “Good Plant” assessment in independent ISO14001 inspection of environmental management in the Head Office for the optimization of air conditioning operation in conjunction with the introduction of a staggered work hour system as part of Mitsui’s Work Style Innovation. (12.8)
- Continuation of the efficient and effective integrated operation of business activities and environmental management in accordance with ISO 14001:2015. (13.3)
- Implementation of climate change risk control methods, such as carbon pricing impact estimation, during deliberation on proposed projects. (13.3)
- Implementation of environmental law seminars (2 seminars, approx. 130 attendees), environmental seminars relating to industrial waste (2 seminars, approx. 100 attendees), and a Mitsui Environment Month lecture (approx. 540 attendees) for officers and employees of Mitsui and its affiliated companies. (13.3)

**Machinery & Infrastructure**
- Contribution to the reduction of CO₂ emissions through investment and participation in EV battery pack manufacturing business (France) and EV bus manufacturing business (Portugal). (7.2)
- Promotion of modal shift through rolling stock leasing. (11.6, 12.4)
- Ordering of new ocean-going methanol carrier powered by clean-burning methanol fuel that can drastically reduce SOx and NOx emissions. (12.4)
- Promotion of a green chemicals business in the field of oleochemicals that utilizes natural oils and fats. (12.5)
- Provision of operational maintenance services for solar and biomass power generation facilities by Mitsui & Co. Foresight. (7.2)

**Chemicals**
- Promotion of geological surveys, drilling and development for the launching of geothermal power business through Mitsui Oil Exploration Co. (Japan). (7.2, 12.5)
- Investment and participation in a wood biomass power plant that utilizes an FIT (feed-in tariff) system for renewable energy and timber from forest thinning investments in Mitsui’s forests. (7.2)
- Establishment of a promising next-generation clean energy asset. (12.2, 12.4)
- Promotions of beneficial “green” technologies, and development of new business for reducing greenhouse gases (U.S.). (7.2)

**Corporate Governance & Human Resources**
- Launching the world’s first hydrogen supply chain project which will produce hydrogen and establish a transportation value chain for the resource as a promising next-generation clean energy asset. (12.2, 12.4)
- Commencement of repair work on production facilities with the aim of reducing flared gas during the production of LNG through investment and participation in Flare Reduction Project (Qatar). (12.4)
- Provision of operational maintenance services for solar and biomass power generation facilities by Mitsui & Co. Foresight. (7.2)

**Environmental Law**
- Making investments to improve new applications for copper and to improve the efficiency of mine operations through a venture fund which was jointly established among Corporacion Nacional del Cobre de Chile (CODELCO) and Corporacion de Fomento de la Produccion (CORFO), etc. We have made investments in technology for improving fish-farming efficiency that features copper-made fish farming cages, as well as recycling technology for waste tire from mine sites. (12.2, 12.4, 12.5)
- Operation of renewable energy IPP business in 8 countries; Mitsui’s share: 1.5 GW. (7.2)
- Expansion of distributed solar power generation capacity and promotion of next-generation energy management services featuring storage batteries (U.S. and other countries). (7.2)
- Promotion of energy-efficient smart city project (Malaysia). (7.3, 11.6)
- Sale/ownership and operation of eco-ships that are highly energy-efficient. (7.3)
- Contribution to the reduction of CO₂ emissions through investment and participation in EV battery pack manufacturing businesses (France) and EV bus manufacturing business (Portugal). (7.3, 12.4)
- Assistance in the development of fuel cost-efficient aircraft and engines. (7.4)
- Promotion of modal shift through rolling stock leasing. (11.6, 12.4)
- Ordering of new ocean-going methanol carrier powered by clean-burning methanol fuel that can drastically reduce SOx and NOx emissions. (12.4)
- Promotion of the reuse of used cars by improving transparency in the increasingly complex used car market through the introduction of a used car auction system that allows individuals to sell cars. (12.5)
- Promotion of a green chemicals business in the field of oleochemicals that utilizes natural oils and fats. (12.5)
- Investment and participation in a biomass power plant that utilizes an FIT (feed-in tariff) system for renewable energy and timber from forest thinning in Mitsui’s forests. (7.2)
- Promotion of geological surveys, drilling and development for the launching of geothermal power business through Mitsui Oil Exploration Co. (Japan). (7.2, 7.4)
- Investment and strategic engagement in new business that is developing next-generation fuel and chemicals from off gases that use microbial fermentation technologies, and development of new business for reducing greenhouse gases (U.S.). (7.4)
- Launched the world’s first hydrogen supply chain project which will produce hydrogen and establish a transportation value chain for the resource as a promising next-generation clean energy asset. (12.2, 12.4)
- Commencement of repair work on production facilities with the aim of reducing flared gas during the production of LNG through investment and participation in Flare Reduction Project (Qatar). (12.4)
- Provision of operational maintenance services for solar and biomass power generation facilities by Mitsui & Co. Foresight. (7.2)

<tr>
<td>Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss (15.2, 15.4)</td>
<td>We have obtained FSC® and other certifications for all our company-owned forests, “Mitsui’s forests”, to drive our biodiversity-friendly papermaking resources business and food business using farming methods that encourage biodiversity. In addition, Mitsui has obtained FSC® and SGEC certifications for all of its 74 company-owned forestlands (approx. 44,000 hectares). We have designated our company-owned forests, “Mitsui’s forests”, into different management zones. Ten percent of all Mitsui’s forests are designated as “biodiversity conservation forests” and are maintained and managed accordingly.</td>
<td>Launched a project that aims to prevent forest degradation and deforestation, and promote forest conservation activities through utilization of the Joint Crediting Mechanism, a Japanese government program that contributes to emissions reduction and addresses climate change. (Cambodia). (15.2)</td>
</tr>
</tbody>
</table>

- Maintenance of FSC®/CoC certification (Mitsui’s Life Essentials Business Div., Forest Resources Marketing Dept.: FSC® C104107; Mitsui Bussan Woodchip Oceania Pty. Ltd.: FSC® C107463) and PEFC/CoC certification, to promote responsible management and handling of forest resources. (15.2)
- Maintenance of FSC®/CoC certification (by Mitsui Bussan Packaging FSC® C009939) to ensure that the supply chain of certified paper promotes responsible forest resources management. (15.2)
- Support by Toho Bussan for the production and sales of rice grown using farming methods that encourage biodiversity (Japan). (15.4)
- Mitsui has FSC® certification and SGEC for all Mitsui’s Forests based on proper management and maintenance. Mitsui’s Forests’ carbon stocks and flows are approximately 560,000 tons per year (Mitsui’s estimate based on “IPCC Guidelines for National Greenhouse Gas Inventories” Tier 1 method). (15.2)

### Theme: Addressing Environmental Issues through Contribution to Society

- Provision of grants through the Mitsui & Co. Environment Fund for university research and NGO activities that contribute to the solution of environmental issues (16 grants totaling ¥117 million), and employee participation in the activities of grant recipients (10 projects, approx. 180 participants) (17.16, 17.17)
- Implementation of school-visits which utilize Mitsui’s forests (designed for elementary school students; 5 visits, approx. 330 participants) and forest experience programs (designed for elementary school children and their parents, and employees and their families; 7 programs, approx. 250 participants) (17.17)
- Supply of a portion of the cedar wood (SGEC certified wood) used in the main roof and eaves of the New National Stadium in Tokyo from Mitsui’s forests. (17.17)
### Environmental Management

#### Environmental Policy

<table>
<thead>
<tr>
<th>Guiding Principles</th>
<th>Policy</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Compliance with relevant environmental laws and regulations</td>
<td>We will comply with various relevant environmental laws and regulations, as well as all agreements signed by the company for promoting business activities.</td>
</tr>
<tr>
<td>2. Efficient utilization of resources and energy</td>
<td>We will strive to reduce the burden on the environment within each of our workplaces and in our business activities through the efficient utilization of resources and energy, as well as the reduction, reuse, and recycling of waste and its proper disposal.</td>
</tr>
<tr>
<td>3. Environmental care for products and services offered, as well as existing and new businesses</td>
<td>We will give the utmost consideration to the environment to the extent technologically and economically feasible by exercising an appropriate degree of influence in enlisting the support and involvement of environmental businesses, as well as evaluating the impact that we have on the environment, not only in the prevention of pollution, but on such issues as global warming and the conservation of biological diversity as well.</td>
</tr>
<tr>
<td>4. Contribution to providing industrial solutions to environmental issues</td>
<td>We will engage in business activities with the goal of providing rational and permanent industrial solutions, and contribute to the realization of “sustainable development” by exploiting our individual abilities and the collective strengths of our organization in cooperation with our global partners.</td>
</tr>
</tbody>
</table>

#### Action Guidelines

1. **Compliance with relevant environmental laws and regulations**
   - Mitsui & Co. believes that one of its most important management themes involves providing a positive response to environmental issues on a global basis, in order to contribute to the creation of a future where the dreams of the inhabitants of our irreplaceable Earth can be fulfilled.

2. **Efficient utilization of resources and energy**
   - Mitsui & Co. will make every possible effort towards realizing a “sustainable development” which is aimed at creating a harmony between the economy and the environment on a global basis.

3. **Environmental care for products and services offered, as well as existing and new businesses**
   - In view of the above principles, and in accordance with the Action Guidelines shown below, Mitsui & Co. will design, periodically evaluate, and continually improve an adequate risk management system, including response to matters such as global warming, nature conservation with consideration given to biological diversity, and the prevention of pollution, which will cover the wide range of activities that it undertakes on a global scale. At the same time, we will strive to ensure the development and dissemination of earth-friendly technologies and further reinforce our responsibility with respect to the environment on a global group basis.

4. **Contribution to providing industrial solutions to environmental issues**
   - Mitsui & Co. believes that one of its most important management themes involves providing a positive response to environmental issues on a global basis, in order to contribute to the creation of a future where the dreams of the inhabitants of our irreplaceable Earth can be fulfilled.

### Environmental Management System

#### Environmental Management Philosophy

Mitsui & Co. maintains environmental management systems based on ISO14001 and various international guidelines as the basis for an active response to environmental and societal problems through the business activities of its global group. We acquired ISO14001 certification in 1999. Since the year ended March 2017, we have been working to strengthen our compliance with ISO14001:2015, including integration with business processes, initiatives in response to business risks and opportunities, and an increased emphasis on stakeholder perspectives.

**Standards Covered**
- ISO14001, ISO26000, the GRI Guidelines, the Equator Principles, the World Bank Procurement Policies and Guidelines, and the IUCN Guidelines

#### Environmental Management System

To facilitate effective environmental management, Mitsui has established the Environmental Management System on a global group basis. We have appointed an executive officer who is responsible for overall environmental management, while the General Manager of the Environmental-Social Contribution Division supervises the operation of the Environmental Management. Other organizations, such as business units, each have their own environmental management structures established by the divisional/departamental general managers. We set company-wide targets, and are continually improving our environmental and societal risk management framework by means of periodic reviews, including the Sustainability Committee meetings.
Mitsui is expanding its business globally in six business areas: metals; machinery and infrastructure; chemicals, energy, lifestyle; and innovation and corporate development. In conducting business in each of these areas, we categorize our activities into “new business phase” and “existing business phase”, and have put in place mechanisms to ensure that the utmost consideration is given to the environment and society during our business activities in each of these phases.

Furthermore, in accordance with the SDG targets, we identify programs that are closely related to our business (such as climate change, biodiversity protection programs) as “opportunities”, and introduced an internal subsidy system for such programs in the fiscal year ended March 2017. Mitsui is seeking to build a sustainable society by simultaneously resolving environmental and societal issues and enhancing business value.

Addressing Environmental and Social Risks and Opportunities in Business

Mitsui & Co. is expanding its business globally in six business areas: metals; machinery and infrastructure; chemicals, energy, lifestyle; and innovation and corporate development. In conducting business in each of these areas, we categorize our activities into “new business phase” and “existing business phase”, and have put in place mechanisms to ensure that the utmost consideration is given to the environment and society during our business activities in each of these phases.

Furthermore, in accordance with the SDG targets, we identify programs that are closely related to our business (such as climate change, biodiversity protection programs) as “opportunities”, and introduced an internal subsidy system for such programs in the fiscal year ended March 2017. Mitsui is seeking to build a sustainable society by simultaneously resolving environmental and societal issues and enhancing business value.

Responding to Environmental and Social Risks (As of March 2018)
Environmental Management for Existing Business

In order to properly monitor and manage various environmental and social risks related to existing business operations, we urge our affiliated companies that are engaged in activities that could cause significant environmental impacts to establish environmental management systems based on the international environmental management standard, ISO14001, or on international guidelines relating to consideration for environmental and social factors. We encourage subsidiaries to establish their own autonomous environment management systems, while maintaining structures to achieve continual improvement by monitoring and reviewing preventive measures based on reports on environmental accidents and other problems.

Responding to Stakeholders
We are identifying business-related risks and opportunities through dialogue with NPOs, NGOs, academia, and government agencies, and considering how we could respond. In the fiscal year ended March 2018, we decided to support a REDD+ project with an international NGO in Cambodia, as well as red tide countermeasures led by JICA through industry-government-academia collaboration between Japan and Chile. We are taking on the challenge of solving problems through transdisciplinary cooperation*, actively promoting initiatives that will lead to business sustainability.

*Initiatives spanning multiple fields across different sectors, such as industry, government, academia, and private sector.

Management of subsidiaries
We select domestic and overseas subsidiaries that need to acquire ISO14001 certification based on comprehensive assessments that take into account such factors as the type of industry, environmental and ecosystem impacts, and input from stakeholders. We urge these companies to introduce environmental management systems based on ISO14001, or on international guidelines, and we help them to build robust management systems.

As of the end of March 2018, out of the 36 target companies, 30 subsidiaries have acquired ISO14001 and 6 companies have introduced environmental management systems in line with the international guidelines.

Response to environmental accidents
During the fiscal year ended March 2018, there were no environmental-related incidents at Mitsui and its subsidiaries. We employ various measures to prevent recurrences of environmental accidents, including the use of collections of case studies to raise employee awareness. Any accident is promptly reported to the relevant units, and comprehensive steps are taken to prevent recurrence, beginning with the identification of the true cause of the accident and an assessment to determine appropriate corrective and preventive measures.

Environmental Management for New Business

Specially designated business management systems and Environmental & Societal Advisory Committee
New business projects are subject to internal screening during the new business phase. If necessary, we convene meetings of the Sustainability Committee and the Environmental & Societal Advisory Committee. Directors make final decisions about ringi approval after receiving reports and proposals from these committees about whether or not a project should be promoted, or how it can be improved. Members of the Environmental & Societal Advisory Committee are selected mainly from among external experts with knowledge of a wide range of fields, such as climate change, environmental restoration, water, air, and soil contamination, environmental policy (including environmental assessment), and stakeholder activities. Committee members also include attorneys and people with experience of government administration.

Use of environmental, social and governance (ESG) due diligence checklists
New business investment projects that will have a significant impact on the environment are investigated by experts.

Before implementing these surveys, we first identify environmental and social risks and create environmental, social and governance (ESG) due diligence checklists for each project. These lists, which are compiled with reference to international standards in relation to environmental and societal consideration, help to focus areas covered by expert surveys. They are shared within the company and used to ensure that ESG perspectives are taken into account in relation to not only pollution prevention but also analysis of risk factors in connection with climate change, ecosystems, indigenous peoples, and water stress.
Mitsui promotes sustainable procurement in partnership with suppliers throughout the world. We work actively to achieve environment-related certification in Japan and overseas, including FSC® certification for forests, and ASC and MSC certification for fisheries, recognizing the importance of natural capital. We also develop procurement mechanisms that take into account the need to address global warming and conserve biodiversity.

Company-owned forests: "Mitsui’s Forests" (Japan)
Mitsui has obtained forest certification for all 74 locations of Mitsui’s Forests (approximately 44,000 hectares) throughout Japan under two international standards: FSC® certification and SGC® certification. Forest certification is based on objective third party assessments of whether forest management meets economic, environmental, and social requirements (principles and standards). Currently, Mitsui is the only private company with large-scale forest holdings in Japan covering over 10,000 hectares that has obtained certification under both of these systems. With respect to both FSC® certification and SGC® certification, Mitsui has received Forest Management (FM) certification, while Mitsui Busan Forest, a subsidiary has received Chain of Custody (CoC) certification for the processing and distribution of cut lumber.

MG MITSUI & CO. LTD.

*1 FSC® certification is based on international standards established by the Forest Stewardship Council®, a non-profit committee-type organization that administers an international forest certification system.
*2 This certification system was developed by the Sustainable Green Ecosystem Council, a general incorporated foundation, by adapting the sustainable forest management philosophy promulgated globally as the “Montreal Process” to the situation in Japan. In 2010, it became possible to distribute SGC® certified timber as timber certified under another international forest certification, the Program for the Endorsement of Forest Certification Schemes (PFEC), following reciprocal recognition between the two systems.
*3 RSPO certification aims to advance the production, procurement, and use of sustainable palm oil and lessen the impact and load on the environment of Sustainable Palm Oil (RSPO), a nonprofit organization that promotes the production and use of sustainable palm oil throughout the world. RSPO certification is based on objective third party assessments of whether palm oil production and use meet economic, environmental, and social requirements (principles and criteria). Currently, Mitsubishi and our investee, Wangsa Mujur Sdn. Bhd. have acquired certification from the Roundtable on Sustainable Palm Oil (RSPO), a nonprofit organization that promotes the production and use of sustainable palm oil.
*4 This certification system is planned and administered by the Global Aquaculture Alliance (GAA), a US-based NGO dedicated to the establishment and spread of responsible aquaculture. The system certifies each component of the aquaculture value chain including hatchery, feed mill, farm, and processing plant. The program, which is represented by the ASC eco-label, is supported by numerous retailers and commercial food suppliers. Currently, ASC certification is reciprocal with the MSC certification system.
*5 The aim of the ASC certification system is to ensure that markets and consumers are supplied with responsibly produced aquaculture products, by certifying aquaculture businesses that show consideration for local communities and do not impose a major load on the environment. Qualifying products are instantly recognizable thanks to the use of eco-labels.

Environmental Management

Acquisition of Environment-related Certification

**System**

**Salmon Farming Business (Chile)**
Mitsui is a shareholder and participant in the business operations of Salomonis Export S.A., a major salmon farming, processing, and sales company in Chile. The company has obtained certification as a sustainable aquaculture business under the Best Aquaculture Practices (BAP) system, which focuses on the five key areas of environmental conservation, social responsibility, animal welfare, food safety, and traceability. Salomonis Export has also achieved Aquaculture Stewardship Council (ASC) certification® for two of its sites in 2017, and is now preparing to obtain certification for additional locations.

**Food Importation and Sales (U.S.)**
Our subsidiary, Mitsu Foods, Inc. (MFI), imports and sells canned tuna certified under the Marine Stewardship Council (MSC) system, the aim of which is to ensure the sustainable supply of seafood over the long-term future. MFI has also obtained MSC certification as an individual company, thanks to its careful management at the distribution stage.

**Shrimp Exporting Business (Vietnam)**
As a shareholder, Mitsui participates in the management of Minh Phu Hau Giang Seafood Joint Stock Company, a Vietnamese company engaged in shrimp processing and exporting. The company has obtained environment-related certification, under the ASC, BAP and Global Good Agricultural Practice (GAP) systems, to meet the needs of buyers and consumers seeking products that have been produced responsibly with care for the environment.

**Palm Oil Import Business (Malaysia)**
Mitsui and our investee, Wangsa Maju Sdn. Bhd. have acquired certification from the Roundtable on Sustainable Palm Oil (RSPO), a nonprofit organization that promotes the production and use of sustainable palm oil. The RSPO stipulates the legal, economic, environmental, and social conditions required for sustainable palm oil production in 8 principles and 43 criteria, and both Mitsui and Wangsa Maju operate in accordance with its policy.

**Independent Practitioner’s Assurance Report**

*This certification system aims to advance the production, procurement, and use of sustainable palm oil and lessen the impact and load on the environment of producing countries and neighboring communities.*
As we work to accelerate environmental initiatives across the global group, it is vital that we raise the environmental awareness of each of our employees at all levels. We conduct seminars and training sessions to promote these messages internally.

Regular seminars and training sessions

We work to raise awareness of environmental issues among employees of Mitsui and its subsidiaries and affiliated companies through regular seminars, environmental law training sessions, and ISO14001 training programs. We also regularly publish in-house environment and social newsletters as a way of raising the environmental awareness of officers and employees.

Environmental Education/Communication

Training seminars on environmental laws and regulations

We continually hold seminars for employees of Mitsui and its subsidiaries and affiliated companies regarding environmental laws and regulations. In the fiscal year ended March 2018, approximately 130 people participated from Mitsui & Co. group companies. We also conducted a separate training seminar on the Waste Management and Public Cleansing Law, providing classroom training focused on precautions in regard to complying with the law, as well as training that covered procedures for on-site checks at waste disposal facilities and actual visits to such facilities.

Mitsui Environment Month

Mitsui has designated June as the “Mitsui Environment Month” each year, during which a variety of programs for officers and employees of Mitsui & Co. and its affiliated companies are held as part of Mitsui’s environmental-education activities. During Mitsui Environment Month 2017, we held the following lectures:

*The World from an Environmental Perspective* – Special Lecture to Commemorate the 10th Anniversary of Mitsui Environment Month

Professor Akira Ikegami was invited to present a lecture commemorating the 10th anniversary of the program this year. His comments, interspersed with humor, demonstrated his extensive knowledge of a wide variety of topics, including the aim behind President Trump’s declaration that the U.S. would withdraw from the Paris Agreement. There were positive comments from those present, with one person saying that the speech provided very useful insights about future world trends from an environmental perspective. Another said his eyes were opened to how consideration for the environment is being reflected in the project, both during construction and after completion. The event gave employees an opportunity to think about the environment in relation to the building in which they will work.

Employees attend lectures about industrial waste and waste disposal facilities and plans
The increasing seriousness of climate change, population growth, resource depletion, and other issues is reflected in growing public interest in nature and biodiversity conservation, in the low-carbon, recycling oriented society, and in renewable energy, as well as in an expanding range of initiatives targeting these issues.

Mitsui & Co. engages in a wide range of business in the world around us, and, under the Environmental Policy Action Guidelines, it positions active participation in finding industrial solutions for environmental issues as one of its highest management priorities. Accordingly, we carry out a broad spectrum of environment-related business activities on a global basis.

In the renewable energy field, as part of its efforts to respond to global warming and build a sustainable society, Mitsui is pursing and strengthening its initiatives related to renewable energy projects all over the world. As of March 31, 2018, renewable energy, including hydroelectric power, accounted for approximately 16% of Mitsui’s total power generating capacity of 9.3GW and aim at increasing the proportion of renewable energy up to 30% by 2030.

In the modal shift field, we are contributing to the building and improving of transportation infrastructure through our engagement in the development and operation of various railway projects, in addition to our long-term railway lease business. As of the end of March, 2018, the total railroad track network in which Mitsui has participated in relation to railway operation amounts to 10,700 kilometers for freight services and 1,922 kilometers for passenger trains.

In the paper manufacturing resource business, Mitsui has been engaged in afforestation projects on the scale of about 24,000 hectares with the aim of securing resources for pulp and paper manufacturing. By cultivating sustainable forests, these projects contribute to protecting valuable natural resources, absorbing and chemically immobilizing carbon dioxide, preserving biodiversity, and preventing soil erosion and salt pollution.

Water resources are becoming increasingly important from a global perspective. In this field as well, Mitsui has been engaged in efficient water infrastructure business in Mexico, Chile, and other locations, utilizing private sector financial resources and technology.

</table>

### Forest Asset Management Business and Eucalyptus Tree-Planting Program

With the aim of contributing to the development of a sustainable society through ensuring a stable supply of forest resources and realizing appropriate forest management by the forests fund including acquisition of carbon credit, Mitsui has invested and participated in New Forests Pty Limited (Australia: forestry funds under management totaling approximately ¥350 billion), which has been engaging in forestry asset management business in Oceania, Asia, and North America. New Forests has been entrusted with the management of forests covering 700,000 hectares. With these forest resources, Mitsui will contribute to the prevention of global warming.

In an eucalyptus tree-planting program (total area planted stood at around 24,000 hectares as of March 2018) in Australia, which Mitsui conducts together with partners such as Nippon Paper Industries Co., Ltd. for the stable provision of wood chips (the raw material for paper), we have acquired either FSC® Forest Stewardship Council® certification or Program for the Endorsement of Forest Certification (PEFC) certification, and engage in business that takes sustainable use and protection of forests and biodiversity conservation into consideration.
Mitsui & Co. is carrying out initiatives for the reduction of greenhouse gas (GHG) emissions from energy sources on a global group basis. From the fiscal year ended March 2006, Mitsui has continually surveyed its domestic GHG emissions in order to understand the amount of its emissions year by year. Mitsui has also announced its objective of reducing energy consumption for Mitsui itself as well as for its domestic subsidiaries, by an average of over 1% per year. The entire global group is working to achieve the goal through various measures, including improvement in energy efficiency. In addition, Mitsui has begun surveying the GHG emissions of its overseas subsidiaries since the fiscal year ended March 2009 and from the fiscal year ended March 2018 onward, the survey has expanded to include un-incorporated joint ventures in the mineral/metal resources and energy sectors. We will continue to monitor the GHG emission amount and explore new initiatives to reduce GHG on a global group basis.

Reducing the Environmental Impact of Offices Activity

All employees at Mitsui strive to reduce the load on the environment not only when conducting business, but also in their office activities through the efficient utilization of energy resources, as well as the reduction, reuse, and recycling of waste and its proper disposal, with the targets of "reduction of electricity consumption by 1% or higher on average per year" and "a recycling rate of 85% or higher by 2020".

Paper Consumption ★

We promote reduction in paper consumption by initially setting up every multifunctional printer with double-face printing and other measures. We also promote use of recycled paper to reduce the environmental load resulting from raw material procurement. The utilization rate of recycled paper for FY 2017 was 98%.

Water Consumption ★

At the Headquarters, we use recycled water for toilet flushing in order to promote reduction in water consumption.

The wastewater amount for FY 2017 was 61,659 m³ (The amount of wastewater that cannot be measured is calculated on the premise that such amount is equal to the amount of water used).

**Assessment of Environmental Liabilities**

Currently, demands are being placed on corporate management to make proactive efforts regarding environmental issues. In addition to satisfying legal requirements, Mitsui understands the environmental risks (particularly asbestos, PCB, and soil pollution) related to tangible fixed assets such as the land and buildings owned by Mitsui itself, as well as those owned by its domestic group companies, through self-driven surveys, and in light of such risks, makes decisions and judgement related to management policies.
Initiatives for Preserving Biodiversity

About Initiatives at Mitsui’s Forests

Overview of Mitsui’s Forests
Mitsui & Co. owns forests in 74 locations in Japan, from Hokkaido in the north to Kyushu in the south. Mitsui’s forests cover a total area of approximately 44,000 hectares, which is equivalent to about 70% of the area of Tokyo’s 23 wards, or 0.1% of Japan’s territory. We have worked under our Forest Management Policy to protect and nurture these forests and make productive use of the benefits that they provide.

Forest Management Policy

1. Guiding Principle
In line with its Management Philosophy, Mitsui will actively contribute to protecting our irreplaceable Earth and fulfilling the dreams of its inhabitants, and we are committed to carefully nurturing our forests to pass them on to the next generation.

2. Management Policy
Mitsui gives its forests the status of “assets with a high degree of public use” that benefit the whole of society. As well as providing the reusable natural resource of lumber, forest can fulfill a range of socially beneficial functions if properly managed and enhanced on a consistent basis; for instance, they can purify the atmosphere by absorbing carbon dioxide to produce oxygen, and they can act as a reservoir that stores and purifies rainwater. On the other hand, if forests are neglected and not adequately maintained, they may increase the likelihood of natural disasters and develop into a source of other social problems. Aware of the social value that its forests possess, Mitsui regards their long-term ownership and maintenance as an important social responsibility. So as to maximize the socially beneficial functions of our forests, we work to enhance these functions based on the FSC®’s Forest Management Principles and Criteria, and also SGEC’s Forest Management Certification Principles and Indicators.

3. Activity Policy
In its concrete activities in the context of its forest holdings, Mitsui will act conscientiously on the basis of the management policy outlined above, giving full consideration to their social significance and maintaining a strong awareness of their environmental impact. Accordingly, we will redouble our efforts in the following areas:

- Offering Forest Environmental Programs to stakeholders
- Research work and concrete action to preserve biodiversity
- Achieving sustainability in the production of wood materials as a reusable natural resource and promoting their utilization as wood biomass

Mitsui’s forests accumulate and absorb 560,000 tons of carbon dioxide annually

It is estimated that Mitsui’s forests currently accumulate and absorb approximately 560,000 tons of carbon dioxide per year. We contribute to the mitigation of climate change risk through sustainable forest management.

*Citing on “IPCC Guidelines for National Greenhouse Gas Inventories” Tier 1.

Cultivating Different Types of Forests: Forest Management Zoning

Mitsui’s forests are divided into “Forests for Regeneration and Harvest” (approximately 40%) and “Natural Forests and Naturally Regenerated Forests” (approximately 60%). Forests for Regeneration and Harvest are forests that have been planted and cultivated by human hands, and follow a repeated cycle of planting, cultivating, harvesting, and utilization for the production and supply of lumber resources. Natural Forests are forests that have been cultivated through natural action, while Naturally Regenerated Forests are forests that have grown back mainly through natural action following deforestation due, for instance, to a natural disaster or tree-harvesting. Forests in these categories are maintained in their natural state. Areas within these forests that are particularly important from the viewpoint of biodiversity are designated as “Biodiversity Conservation Forests” (approximately 10% of all Mitsui’s forests).

Mitsui manages Mitsui’s Forests in accordance with the forest management zoning categories as shown below. Appropriate management is applied to each forest category.

Mitsui has acquired forest certification for all 74 of Mitsui's forests throughout Japan (approx. 44,000 hectares) under two international standards: the FSC® (license No. C057355), and the SGEC (Certification No. SGEC/21-21-1101). Forest certification is given based on assessments by an independent institution regarding whether fixed criteria are met concerning forest management methods. The spread of such certification prevents unregulated deforestation, preserves healthy forests, and helps protect the global environment.

Mitsui is currently the only private sector company with large-scale forest holdings in excess of 10,000 hectares in Japan that has obtained both of these certifications. This status allows us to respond to demand for various types of certified timber. For the G7 Ise-Shima Summit in May 2016, FSC-certified cypress timber from a forest owned by Mitsui was used for the main table. In the fiscal year ended March 2018, Mitsui supplied some of the cedar (SGEC-certified) for use in the roof and eaves of the New National Stadium.

While FSC® certification is a type of certification established by the Forest Stewardship Council (FSC®), an international NGO with a membership system, the SGEC certification system is unique to Japan and was established by the general incorporated association Sustainable Green Ecosystem Council. However, in 2016 following approval of reciprocal certification with PEFC, which is another international certification system, SGEC became an international forest certification system. Both FSC® and SGEC certification provide basic principles, standards, and indicators for conducting appropriate forest management from environmental, social, and economic perspectives. The certifications require forest managers to not only conduct forest management on an economically sustainable basis, but also give proper consideration to the environment and the develop good relationships with local communities near forests. We have continued building good communication with local communities. In the fiscal year ended March 2018, we conducted questionnaire surveys and interviews with five Ainu organizations in Hokkaido.

Mitsui cooperate with the Cambodian Ministry of Environment. Conserving the Prey Lang Forest in Cambodia (REDD+) is an international NGO, Mitsui aims to use the REDD+ mechanism established under the Paris Agreement to contribute to forest and biodiversity conservation in the Prey Lang Forest, in cooperation with the Cambodian Ministry of Environment. In partnership with Conservation International, an international NGO, Mitsui supports the campaign to promote the use of Japanese-grown timber as a way of revitalizing the Japanese forestry industry and providing additional impetus for regional development. For example, we can use unregulated deforestation, preserves healthy forests, and helps protect the global environment. In the fiscal year ended March 2018, part of the cedar timber (SGEC certified) to be used in the roof and eaves of the New National Stadium was supplied from Mitsui's forests.

In the area of environmental education, Mitsui's forests are used for field studies that teach people about the role of forests, for forestry experience programs, and for various other activities within and beyond the Mitsui organization. In the area of helping to protect culture, we have entered into an agreement with the Biratori Ainu Association concerning the protection and fostering of Ainu culture. In order to contribute to local communities, we also have started to promote the use of wood biomass as an alternative to fossil fuels. For example, we advise communities to steadily supply timber fuel to a biomass power generation plant in Tomakomai, Hokkaido in which we have invested (commercial operations started in April 2017). We are also planning to supply timber fuel reliably also to another biomass generation project at Shimikawa-cho, Hokkaido.

Mitsui is also an active supporter of biodiversity conservation activities in cooperation with NPOs/NGOs. Over the past fiscal year, we conducted field studies at company-owned Kameyama forests, Forestry program (tree thinning experience) at company-owned Kameyama forests and near Prey Lang Village. For example, we use unregulated deforestation, preserves healthy forests, and helps protect the global environment. In the fiscal year ended March 2018, part of the cedar timber (SGEC certified) to be used in the roof and eaves of the New National Stadium was supplied from Mitsui's forests. Selection of Grant Recipients

[Mensaje de un miembro del Comité de Selección]

El global social and economic situation relating to the environment is changing significantly, including the signing of the Paris Agreement as a response to climate change, the adoption of the SDGs by the United Nations, and the emergence of ESG investment. Every aspect of life is being affected by these changes. There has also been a significant shift of direction in the criteria used to select issues for the Mitsui & Co. Environment Fund.

In the past, we tended to prioritize the conservation of ecosystems and biodiversity. Our priorities today include the reduction of CO2 emissions, the solution of societal issues, and the governance of all organizations in relation to these issues.

These changes were reflected in our approach when calling for applications for Mitsui & Co. Environment Fund grants in the fiscal year ended March 2018. We gave priority in our selection process to activities and research that would take up the challenge of finding solutions for issues that are regarded as socially significant. We will continue to emphasize these aspects going forward by striving to select proposals that demonstrate high aspirations toward our goal of contributing to the creation of a sustainable society for the future, and a commitment to social change.

* Figures in parentheses show the Great East Japan Earthquake Restoration Grants. However, since the fiscal year ended March 2014, we have continued to support restoration projects within the framework of regular programs, without providing a separate additional framework. The total value of the restoration projects since the fiscal year ended March 2012 is ¥1.32 billion.
An agronomist employed by Anagra checking crop growth.

Norihiko Hasegawa
Deputy General Manager, Ag-Inputs Department, Fertilizer Division, Nutrition & Agriculture Business Unit

Helping to improve farmer’s QOL by providing “fertilizer optimized to the soil conditions”

While many developing nations suffer from inadequate fertilizer application in the agricultural sector, there are also emerging countries where excessive application of fertilizer on arable land is resulting in the deterioration of the soil, and where fertilizer is used wastefully in ways that do not improve crop yield.

Anagra, the company whose operations I am responsible for overseeing, provides “custom-blended fertilizer” that uses ingredients which are optimally blended based on data derived from science analysis of soil samples that the company obtains from individual farms. Anagra also provides farmers with detailed farm management guidance, implemented by agronomists, which is very successful in helping farmers to maximize the potential of the soil.

The social significance of this business model lies in the fact that, by providing the right elements in appropriate quantities at the correct time, when the soil needs them, without the unnecessary application of excessive amounts of fertilizer, it is possible to safeguard the environment while also boosting farmers’ incomes, and helping to enhance farmers’ quality of life (QOL). Furthermore, because farmers are under less pressure, it is easier to get them interested in suggestions that they try experimenting with new crops next year, for example. By putting forward proposals that have a high degree of reliability because they are based on scientific data, it is possible to make a substantial contribution towards helping farmers to realize sustainable growth.

Spreading the latest agricultural management methods to countries all over the world, as a response to climate change

Plants that have always been grown in a particular region can no longer be grown there successfully, while plants that one would have thought would be unsuitable for cultivation in that region can now be grown there—this kind of phenomenon is gradually starting to be seen in Chile too. Anagra believes that, in order to help agriculture adapt to climate change, it is possible to use the company’s accumulated data and knowhow in activities that help farmers to hedge against climate change risk and boost yields. Water conservation is also sure to become an important issue in agriculture in the future, and Anagra provides farm management guidance based on the thinking that, as with fertilizer, it is important to avoid unnecessary excessive use of water resources.

Our intention is to take these new farm management techniques and expand their adoption to countries and regions through the world. Besides investing in Peruvian fertilizer sales company Equilibra Peru S.A., Mitsui also aims to contribute to raising the incomes of people working in the agricultural sector, and towards enhancing food security, through our partnership with ETC Group, a company that is developing sales of agricultural materials etc. in regions such as East Africa.

There are still many aspects of agriculture that humans do not yet fully understand. Precisely for this reason, we want to help solve the problems affecting food production and affecting farmers by integrating the power of science with Mitsui’s outstanding business development capabilities and extensive networks.
Activities for FY 2017 to Contribute to SDGs

Theme: Resource Development, and the Securing and Stable Supply of Materials and Food

End hunger, achieve food security and improved nutrition and promote sustainable agriculture (2.1, 2.4, 2.a)
Ensure healthy lives and promote well-being for all at all ages (3.8, 3.b)
Ensure access to affordable, reliable, sustainable and modern energy for all (7.1, 7.2, 7.b)
Make cities and human settlements inclusive, safe, resilient and sustainable (11.c)
Ensure sustainable consumption and production patterns (12.2)

Mitsui is building optimal supply chains spanning all stages from upstream to downstream, including production, distribution, processing, and logistics, and contributes to the stable supply of resources and raw materials, such as metals, chemicals, energy, and food resources. In our food business, against the backdrop of world population growth which is widening the gap between food supply and demand, and expanding regional imbalances in supply capacity, we promote business to ensure the stable and efficient supply of safe, reliable food resources. We place particular importance on traceability management for grain crops, such as wheat, corn and soybeans, starting at the production and collection phases.

Stable supply of raw materials, such as nickel, cobalt, lithium and aluminum that are used in automotive manufacturing (automotive rechargeable batteries, hard metals, and lightweight materials). (7.1)
Continuation of the development and securing of a stable supply of iron ore (Australia, Brazil), coal (Australia, Mozambique), and copper (Chile). (12.2)
Contribution to LNG and other international resources and energy logistics through the stable supply of international ship space (sales of newly built ships and used ships, and chartered ships). (7.1)
Offering of LNG regasification services with a low environmental load through long-term chartering business for floating storage and regasification unit (FSRU) (Pakistan). (7.1)
Continuation of the development and securing of a stable supply of iron ore (Australia, Brazil), coal (Australia, Mozambique), and copper (Chile). (12.2)
Contribution to LNG and other international resources and energy logistics through the stable supply of international ship space (sales of newly built ships and used ships, and chartered ships). (7.1)
Stable supply of raw materials, such as nickel, cobalt, lithium and aluminum that are used in automotive manufacturing (automotive rechargeable batteries, hard metals, and lightweight materials). (7.1)
Continuation of the development and securing of a stable supply of iron ore (Australia, Brazil), coal (Australia, Mozambique), and copper (Chile). (12.2)
Contribution to LNG and other international resources and energy logistics through the stable supply of international ship space (sales of newly built ships and used ships, and chartered ships). (7.1)

Stable supply of round raw timber from Mitsui’s forests as fuel for the wood biomass power generation plant in Tomakomai, which commenced electricity sales in April 2017 (cumulative total of approx. 87,380 m³ as of March 2018, representing approx. 51% of total volume). (7.2)
Stable supply of ligneous resources through production of round raw timber from Mitsui’s forests, which constitutes about 0.1% of Japan’s entire wood consumption in terms of round timber (approx. 51,570 m³). (11.c)

Resource Development, and the Securing and Stable Supply of Materials and Food

Initiatives through Business

Mitsui & Co. has built optimal supply chains, spanning all stages from upstream to downstream, including production, distribution, processing, and logistics, and contributes to the stable supply of metals, chemicals, energy, food and other resources and materials.

As part of its efforts, Mitsui engages in investment and trading business in such areas as oil, natural gas/LNG, to secure and supply the energy resources needed by industrial society. In particular, we participate in natural gas/LNG development projects in various parts of the world to ensure stable supplies of this clean energy resource. Our extensive involvement covers the entire value chain, from production to marketing. In addition, looking ahead toward the realization of the low-carbon society, we are engaging in the commercialization of renewable energy technologies, such as bio-fuels, and the creation of business models for hydrogen transportation and storage.

Mitsui actively participates in the development of iron and steel raw materials and non-ferrous metals resources. We endeavor to ensure stable supplies of mineral and metal resources, such as iron ore and copper, for Japan and other markets around the world. We are also building a supply network of metal scrap in preparation for the global recycling society of the future. With iron and steel products, we are building supply structures for infrastructure projects to meet buoyant demand in rapidly growing emerging economies. At the same time, we procure and supply iron and steel products for a wide range of industrial sectors, including the motor vehicle industry and the energy sector.

In the automotive sector, we not only export vehicles, but also conduct local logistics business in respective regions, and have built a stable global chain spanning from production to finance. As regards our rail transport business, in addition to the export of freight cars and related equipment, we also engage in leasing business and other services to meet a variety of needs across the railroad value chain.

Our food business, against the backdrop of world population growth widening the gap between food supply and demand, and expanding regional imbalances in supply capacity, we strive to ensure the stable and efficient supply of safe, reliable food resources. We place particular importance on traceability management for grain crops, such as wheat, corn, and soybeans, starting at the production and harvest stages.

Mitsui is also deepening its engagement in the agricultural sector, including the manufacture of the nutritional element methionine, as well as the development of phosphate rock fertilizer resources, and global trading of fertilizer raw materials, such as sulfur and sulfates. We are also developing our chemicals business through wide-ranging transactions and investments that contribute to various industries, including new initiatives focused on carbon fiber and green chemicals.

Promotion of Supply Chain Management

Supply Chain CSR Policy

Mitsui has built diverse value chains throughout the world and provides a wide range of functions and services. We are active at every stage of the supply chains, from upstream to downstream, and have as many as 20,000 business partners. In conducting business globally, we are fully aware of our responsibilities, such as complying with laws, respecting human rights, and maintaining safe and sanitary working conditions, giving comprehensive consideration to reduction of the environmental load, and ensuring safety for products and services and consumer confidence. Together with our business partners, we endeavor to solve various issues present in our supply chains in order to meet society's demands.

In order to correctly assess and solve CSR-related issues in the supply chains, Mitsui formulated its Supply Chain CSR Policy in December 2007, and has since worked to ensure that all of Mitsui's business partners fully understand our standards and cooperate in the implementation of the policy. We are working to ensure compliance with and implementation of this policy while continuing to review the policy based on society's changing expectations and demands. We are making every effort to enhance our supply chain management by identifying potential problems in our supply chains and identifying key CSR issues based on the characteristics of each business model, country, and industry.

Supply Chain CSR Policy

1. Mitsui & Co. will strive to contribute to the creation of a sustainable society by understanding and solving issues associated with the supply chains of its businesses, consistent with the wishes of its stakeholders.
2. Mitsui & Co. will strive to support improvements in the supply chains by seeking understanding and implementation of the following principles by its business associates:
   1. To engage in fair trade, prevent corruption, and comply with all applicable laws and regulations
   2. Not to be complicit in human rights abuse and violations
   3. To prevent discrimination with respect to hiring and employment
   4. To respect the rights of employees to associate freely and bargain collectively
   5. To appropriately monitor employees' working hours, holidays, and leaves of absence, and prohibit unlawful excessive work
   6. To prevent forced labor, child labor, unlawfully-cheap labor, physical discipline, and physical, sexual and other forms of harassment
   7. To ensure a safe and sanitary work environment
   8. To reduce and mitigate business impact on the global environment
   9. To ensure the safety and reliability of products and services
   10. To disclose appropriate and timely information relevant to the above issues

Mitsui actively participates in the development of iron and steel raw materials and non-ferrous metals resources. We endeavor to ensure stable supplies of mineral and metal resources, such as iron ore and copper, for Japan and other markets around the world. We are also building a supply network of metal scrap in preparation for the global recycling society of the future. With iron and steel products, we are building supply structures for infrastructure projects to meet buoyant demand in rapidly growing emerging economies. At the same time, we procure and supply iron and steel products for a wide range of industrial sectors, including the motor vehicle industry and the energy sector.

In the automotive sector, we not only export vehicles, but also conduct local logistics business in respective regions, and have built a stable global chain spanning from production to finance. As regards our rail transport business, in addition to the export of freight cars and related equipment, we also engage in leasing business and other services to meet a variety of needs across the railroad value chain.

Our food business, against the backdrop of world population growth widening the gap between food supply and demand, and expanding regional imbalances in supply capacity, we strive to ensure the stable and efficient supply of safe, reliable food resources. We place particular importance on traceability management for grain crops, such as wheat, corn, and soybeans, starting at the production and harvest stages.

Mitsui is also deepening its engagement in the agricultural sector, including the manufacture of the nutritional element methionine, as well as the development of phosphate rock fertilizer resources, and global trading of fertilizer raw materials, such as sulfur and sulfates. We are also developing our chemicals business through wide-ranging transactions and investments that contribute to various industries, including new initiatives focused on carbon fiber and green chemicals.
We attach great importance to interactive communication with suppliers. We also conduct supplier questionnaire surveys and on-site surveys based on our Supply Chain CSR Policy.

Company-wide uniform supplier communication forms
Beginning in the fiscal year ended March 2009, we started sending letters (in Japanese, English, Chinese, French, Spanish, and Portuguese) to all suppliers of Mitsui’s business units, overseas offices, and subsidiaries (more than 45,000 suppliers in total) requesting their understanding and cooperation in regard to our Supply Chain CSR Policy, in a move to ensure that all Mitsui suppliers are fully aware of this policy. In addition, we conduct internal examinations in alternate years, to verify that the letters were dispatched to the suppliers.

Supplier questionnaire surveys
In promoting compliance with this policy, we consider interactive communication with our suppliers to be very important. We work to build relationships of trust, and strengthen our supply chain management by working jointly on ideas for improvements with our partners, wherever needed.

For this reason, we regularly conduct questionnaire surveys targeting the suppliers of Mitsui and its subsidiaries to confirm (1) the status of their adherence to our Supply Chain CSR Policy, and (2) whether they have CSR policies related to such areas as “human rights and labor practices”, “health and safety”, “business ethics”, and “environmental management”.

In the fiscal year ended March 2012, Mitsui conducted supplier questionnaire surveys for coffee, cocoa, and other agricultural products (39 companies), as well as for consumer products such as apparel (153 companies). In the fiscal year ended March 2015, as part of a new initiative, we selected our main suppliers from all our business domains for the survey (72 suppliers in the fiscal year ended March 2015, 39 suppliers in the fiscal year ended March 2016, 50 suppliers in the fiscal year ended March 2017 and 68 suppliers in the fiscal year ended March 2018).

Supplier on-site surveys
In addition to the above-mentioned supplier questionnaire surveys, we also conduct supplier on-site surveys in order to conduct interviews with responsible persons and check the situation at the operation sites, in accordance with the checklist for compliance with the Supply Chain CSR Policy.

In the fiscal year ended March 2015, we conducted on-site surveys of coffee bean farms in Brazil, in the fiscal year ended March 2016, suppliers of pulp and paper manufacturing resources, and in the fiscal year ended March 2017, suppliers of food material. In the fiscal year ended March 2018, our targeted suppliers were oleochemical product supplier and we visited an oleochemical company (Mitsui’s supplier) in Malaysia, their factory, and palm plantations from which oleochemical is procured. We conducted on-site surveys together with an external expert to check operation site situations with regard to such areas as “environmental management”, “human rights and labor practices”, “legal compliance” and “quality control and traceability”. No violations of our Supply Chain CSR Policy were found.

Future Actions System Activity
We will continue taking appropriate measures to ensure that all suppliers of Mitsui and its subsidiaries understand our Supply Chain CSR Policy, and that we grasp the actual situation of the business, with regard to how the supply chain follows our CSR Policy. We will also continue sending out letters to new suppliers to obtain their agreement to follow our Supply Chain CSR Policy prior to starting business relationships with them. In the event that we discover violations of this policy in our supply chain, we will urge the supplier to remedy and improve the situation, while providing support to the suppliers as needed. However, if there are no improvements to the situation by the suppliers, we will determine carefully whether to continue our business with that supplier.

To increase the sensitivity of all employees with respect to human rights, labor, and other issues in our supply chains, and to prevent problems, we will continue to heighten employee awareness and provide training seminars (35 participants in the fiscal year ended March 2018).
Stable Supply of Resources & Materials

Sustainability Report 2018

by Mitsui.

Malaysian company that is the main supplier of palm oil and palm kernel-derived oleochemicals handled to carry out these surveys, we visited a chemical plant, group-owned plantations, and an oil mill of a establishment. It is a major company that has been actively involved in preparation of more sustainable initiatives.

At the manufacturing company’s factory, we inspected the manufacturing process, the quality control laboratory, the control room, the storage facility, the packaging processes, the wastewater treatment facility, and the employees’ canteen. During interviews with the managers and employees, we carried out checks on “environmental management,” “human rights and labor practices,” “legal compliance,” and “quality control and traceability.” At the palm plantations, we inspected the plantations, the oil mill, and the biomass power plants. During interviews, we confirmed that initiatives are being implemented in respect to the environment, as well as safety and labor practices.

As a result of the on-site surveys, it was confirmed that all matters are being handled properly, and that all requirements of the Supply Chain CSR Policy have been satisfied. We will continue to carry out on-site surveys relevant to supply chain CSR.

Mitsui conducts interviews with supplier representatives and carries out on-site surveys in accordance with the checklist prepared under our Supply Chain CSR Policy, and reviews the status of suppliers’ sustainability initiatives.

In March 2018, we visited a factory and plantations of a Malaysian oleochemicals manufacturing company who is a supplier to Mitsui, and we carried out on-site surveys. Oleochemicals are natural–oil derived fatty acid products, such as palm oil and palm kernel oil. They are widely used as ingredients for a variety of everyday products, such as detergent and shampoo, as well as industrial products.

This is the factory of the oleochemicals manufacturing company we visited.

Dr. Naoki Adachi, CEO of Response Ability, Inc.

To carry out these surveys, we visited a chemical plant, group-owned plantations, and an oil mill of a Malaysian company that is the main supplier of palm oil and palm kernel-derived oleochemicals handled by Mitsui.

The supplier we visited this time has been a member of RSPO since its very early stage of establishment. It is a major company that has been actively involved in preparation of more sustainable and stricter standards. It was confirmed that the supplier carries out appropriate management and safe operation in accordance with relevant standards, in addition to that of RSPO.

The fact that the company also uses its by-products to generate electricity, thereby reducing greenhouse gases, is very progressive.

In addition to meeting RSPO standards, in order to ensure the sustainability of a business as a manufacturer that uses palm oil as a raw material, it is becoming increasingly important to proactively implement a variety of measures from environmental conservation and worker protection perspectives.

During the survey, it was very reassuring to see that the supplier is making efforts in this respect. Meanwhile, challenges remain, including the need to support smallholders and the question of how to increase production without further deforestation.

It is hoped that Mitsui and this supplier will display strong leadership in further strengthening sustainable supply chain in spite of these extremely difficult challenges.

Summary of Supplier On-site Surveys (Procurement of oleochemical products)

Examples: Assessing and Solving Supply Chain Issues

Supply Chain CSR Initiatives

MITSUI BUSSAN FASHION LTD. (“MIF”), a Mitsui subsidiary engaged in the trading of textile raw materials, industrial raw materials, and woven and knitted fabrics, as well as the production and procurement of apparel and fashion goods, aims to achieve sustainable growth in ways that allow it to exist in harmony with society. MIF is making a determined effort to find solutions to various issues by continuing the supply chain CSR activities, by conducting business that creates environmental value, and by pursuing initiatives relating to human rights management.

As a member of the Mitsui group, MIF undertook the following supply chain CSR activities in the fiscal year ended March 2018, with an eye on becoming a company worthy of earning the trust of all stakeholders, including shareholders, suppliers, customers, employees, consumers, and local communities.

1. MIF obtained “written consent to compliance” from all 340 new business partners (238 in Japan, 102 overseas) with whom the company started doing business.
2. Of the industrial wastes emitted by MIF, waste plastics are particularly difficult to recycle and had previously been treated as residue to be used as fillers in cement, etc. However, we have now changed our processing of waste plastics so that they can be used as high-quality solid refuse paper & plastic fuel (RPF), which emits approximately 40% less CO2 compared to fossil fuels, thereby contributing to the prevention of global warming.

In addition to these initiatives, MIF engages in the development and sale of environmentally-friendly textile-related products with advanced functionality that are kind to and safe for the Earth and its people. MIF has also obtained certification and registration under bluesign® and the Global Recycle Standard (GRS) and maintains compliance with these standards, which are regarded as among the most stringent in the world.

Visit to the manufacturing plant of a supplier

To obtain bluesign® certification and registration, MIF is required to ensure that its collaborating supply-chain manufacturing facilities in Japan and overseas are taking comprehensive steps to care for not only the environment but also their workers. An applicant company and its supply-chain facilities must meet the standards set out for bluesign® certification, such as the prohibition of child labor, the elimination of forced labor and discrimination, upholding of freedom of association, and occupational safety and health.

If an infringement of the Supply Chain CSR Policy or related laws and regulations has occurred at a supplier, MIF has a system in place to support and follow up on remedial action and improvements by the supplier to ensure the overall soundness of the CSR management framework throughout its supply chains.

MIF also regards support for the development of appropriate working environments at suppliers in Japan and overseas (through ongoing day-to-day communication with them) as an important part of its role as a sustainable company in its supply chains.

MIF established its Supply Chain CSR Policy. The company began sending notices to its suppliers, including contracted manufacturers in Japan and overseas, to request their understanding of and support for MIF’s policy and to obtain their written confirmation.

MIF conducted a questionnaire survey of its 93 main suppliers concerning the utilization of the Technical Intern Training Program.

MIF started to require its suppliers to understand and comply with its Supply Chain CSR Policy and to obtain written consent from its 26 main suppliers and new suppliers.

MIF required the aforementioned 26 suppliers to conduct a CSR self-check concerning their compliance with the policy.

MIF asked the 241 suppliers from which it had obtained “written confirmation” to replace this expression with “written consent”.

The Supply Chain CSR Policy formulated in October 2008 was expanded from 7 items to 10.

As of March 31, 2018, MIF had obtained “written confirmation” and “written consent” from a total of 5,352 suppliers: 4,134 in Japan, and 1,218 overseas.
Bau Farm values its employees and improves the quality of its products by improving the quality of the labor. Mr. Fukuda believes that “careful work comes from motivation, and motivation is created by the good treatment and education of employees”. The owner’s philosophy is reflected in the efforts made by the employees themselves to improve the working environment and consistently apply the 5S methodology. Employees also gain a deeper understanding of the world of coffee through training and workplace education, giving them relevant knowledge and experience of the product and about trends in coffee-consuming countries. This commitment to high-quality employee education has enabled Bau Farm to maintain a stable workforce, giving it an important advantage over other coffee farms.

Moreover, under the slogan of “kaizen”, the Farm actively introduces new technologies to produce even better coffee. Bau Farms’ another distinctive characteristic is its commitment to constantly trying new ideas that utilize new methods and kinds of coffee trees. For example, by installing an irrigation system for avoiding drought damage, Bau Farm also increases the efficiency of its workforce by controlling the flowering period of the plants in order to stagger the harvest periods. It has also introduced GPS for effective soil improvement.

The green coffee beans that Mitsui supplies to consumers embody the producer’s determination to grow high-quality beans through initiatives such as these. We bring the owner of Bau Farm to Japan once every two years to engage in direct dialogue with coffee shop proprietors and beverage manufacturers. These visits provide excellent opportunities to gain a deeper understanding about the needs of consumers. Similarly, when Mitsui customers who handle Bau Farm coffee visit Brazil, we create opportunities for them to visit the farm so that they can learn more about the place where the coffee is grown. Through initiatives such as these, Mitsui works to bring producers and consumers together in a value chain based on face-to-face communication.

Mitsui will continue its efforts to provide consumers throughout the world with stable supplies of high-quality coffee, and to contribute to the success of producers through its business activities.
Mitsui Norin, Co., Ltd., our subsidiary, markets “Nitto Black Tea,” which is a very familiar brand in Japan. The company procures tea leaves from tea producers around the world to meet a wide range of customer needs. At present, it procures tea leaves from approximately 450 tea producers in eight countries, including India, Sri Lanka, Kenya, and Indonesia. Mitsui Norin designates as its preferred suppliers those tea producers which give appropriate consideration to quality and safety, the environment, and work conditions, for example by carrying out controls based on Rain Forest Alliance certification and Hazard Analysis and Critical Control Point (HACCP) certification, being committed to Fair Trade, and engaging in organic cultivation. In August 2017, Mitsui Norin had the honor of being awarded a Certificate of Appreciation from Sri Lanka’s Minister of Plantation Industries for its long-standing commitment to Sri Lankan black tea over seven decades.

In the Darjeeling district of India, for example, one producer has been making various efforts to improve both the work conditions of employees and the profitability of the business, for example by introducing a small hydroelectric generator on the farm, entrusting its management and operation to the workers, growing and selling organic produce such as ginger and oranges, and producing honey. The producer also raises cows on the farm to provide milk to children to enhance the quality of life of the workers and their families, and uses the manure as fertilizer for organic cultivation to contribute to reducing environmental load.

Mitsui and Mitsui Norin undertake comprehensive quality control in all phases of the value chain. To ensure complete traceability in all product stages from procurement of raw materials to manufacturing, inspection, shipment, and delivery, both companies have tests for residue agrochemicals on the tea leaves conducted at a third-party contract institution, in addition to on-site visits and confirmation at the tea farms.

Examples: Assessing and Solving Supply Chain Issues

Tea Leaves Procurement in Consideration of Quality, Safety, the Environment and Work Conditions

As one of Mitsui’s missions is to ensure the stable supply of building materials, paper resources, and other wood products, we cooperate with suppliers from around the world to ensure that our purchases contain no illegally logged lumber.

For example, in our forest resources business for pulp and paper manufacturing in Australia, Mitsui implements environmental management and operation procedures based on the two major forest certifications, the Forest Stewardship Council® (FSC®) and the Programme for the Endorsement of Forest Certification Schemes (PEFC), and we conduct regular checks to ensure that only reputable plantation operators are used, that operations do not result in environmental destruction, for example through chemical soil contamination, and that the obligation to replant logged areas is being fulfilled. In addition to Australian companies, in 2014 Trans Pacific Fibre, a forest resources business for pulp and paper manufacturing joint venture company in Chile, obtained both FSC® and PEFC certification.

Increased awareness of environmental conservation has led to increased numbers of companies and consumers who choose products with the above-mentioned forest certifications when they purchase wood and paper products. Mitsui cooperates with its partners and manufacturers to increase the use of FSC® and PEFC certified products in the supply chain, in order to create products that are in accordance with higher awareness of environmental conservation.

Promotion of Supply Chain Management

Significant deforestation and reduction and degradation of biodiversity and forest ecosystems caused by illegal logging have become major environmental issues globally. In 2006, as a countermeasure against illegal logging, the Japanese government enacted the Green Purchasing Law, which requires that government agencies only purchase lumber that is certified to have come from legal logging in sustainably managed forests.

As one of Mitsui’s missions is to ensure the stable supply of building materials, paper resources, and other wood products, we cooperate with suppliers from around the world to ensure that our purchases contain no illegally logged lumber.
With the trend towards smaller families and an aging population, Japan will be one of the first countries in the world to directly experience the many problems associated with a declining population. In response, the Japanese government is aiming to realize “Society 5.0,” a new kind of social structure that can help solve both the problems of economic development and social issues. One of the most important issues affecting Japanese industry today is the labor shortages resulting from smaller families and the aging population structure. Mitsui & Co. believes that, besides measures to reduce the number of workers needed, the adoption of robotic devices that make manual work easier to perform is also an effective way of helping to realize this new society, and that the market for such devices can be expected to grow. In 2013, Mitsui invested in ATOUN Inc.* , a company that has developed wearable robotic devices. ATOUN’s corporate vision is to help realize a society in which the “power barrier” relating to inadequate muscular strength and stamina (due to aging or gender) can be overcome, making it possible for anyone to continue doing the work they want to do. By making effective use of Mitsui’s networks and functional capabilities, it should be possible to stimulate and develop demand for these products, creating a whole new market for wearable robotic devices—that is, Mitsui’s mission.

One of the most important issues affecting Japanese industry today is the labor shortages resulting from smaller families and the aging population structure. Mitsui & Co. believes that, besides measures to reduce the number of workers needed, the adoption of robotic devices that make manual work easier to perform is also an effective way of helping to realize this new society, and that the market for such devices can be expected to grow. In 2013, Mitsui invested in ATOUN Inc., a company that has developed wearable robotic devices. ATOUN’s corporate vision is to help realize a society in which the “power barrier” relating to inadequate muscular strength and stamina (due to aging or gender) can be overcome, making it possible for anyone to continue doing the work they want to do. By making effective use of Mitsui’s networks and functional capabilities, it should be possible to stimulate and develop demand for these products, creating a whole new market for wearable robotic devices—that is, Mitsui’s mission. ATOUN Inc. was established in 2003 as a robotics start-up through the “Panasonic Spin-up Fund,” an intrapreneurship initiative launched by what was then Matsushita Electric Industrial Co., Ltd, and is now Panasonic Corporation. In 2013, ATOUN was operating under the name “Activelink Co., Ltd.”

Providing support to help senior citizens and women remain active in the workforce, by working to prevent resignations caused by back pain

In the logistics sector, in the construction industry, in factories, and in the agriculture and forestry sector, etc., there are always some tasks that involve lifting, carrying and putting down heavy loads. This can be a cause of back pain. I have seen many cases where operators have quit their jobs, or report industrial accidents, because of back pain. The ATOUN MODEL A power-assisted suit that ATOUN launched in 2015 was developed with this problem in mind; simply wearing this suit was enough to significantly reduce the load placed by hard manual work on the back.

However, there were some aspects of ATOUN’s first model that users were not completely satisfied with, with some users commenting that the suit was “heavy” and “difficult to put on,” and that “the part of the suit in contact with the midle back makes you feel very hot.” I passed on this feedback from product users to ATOUN, and played a supporting role in relation to their efforts to improve their existing products and develop new types of product. The new model that ATOUN launched late in 2017 is approximately 40% lighter than their early model thanks to successful redesign of the motor and battery to make them more compact. This makes it feel as though you are “wearing” the device, and this is reflected in the new-name “Powered Wear.”

Because ATOUN’s products can be used when stacking or moving heavy objects, they make it possible for women to perform jobs that in the past only men could do. They can also reduce the incidence of workers resigning because of back pain. In this way, ATOUN’s products can help to extend people’s active lives, while also supporting the continued development of particular regions and industries. I personally hope that, through creating the kind of “miraculous suits,” it will be possible to make a meaningful contribution to local communities.

Building a society in which a wide range of people can exert “strength beyond what they themselves possess”

Recently, there has been an increase in inquiries from sectors such as agriculture and forestry that are being affected by the aging of the population. In Japan in particular, we now have a situation where forests that were planted shortly after the end of the Second World War are now reaching maturity, but these resources cannot be fully utilized because of labor shortages. In addition, because forests are not being managed properly, their ability to sequester CO₂ is being weakened. We are contributing to the solving of these issues through the forming of a consortium to undertake joint development of powered suits for use in the forestry sector that can help workers to walk more easily on slopes.

I hope to be able to play a meaningful role in the process of transforming Japan from a “country that leads the world in new problems” to a “country that leads the world in solving new problems.” Even more importantly, I hope to see the development of a society in which it is accepted as normal for people and robots to coexist with one another. Imagine a future in which people can enjoy safer, healthier lives than now, and in which a wide range of different types of people can exert “strength beyond what they themselves possess” in a wide variety of jobs—I firmly believe that this future is just around the corner.

Koji Higashiura

Rental Dept., Construction & Industrial Machinery Div., Integrated Transportation Systems Business Unit I

ATOUN is undertaking joint development of powered suits for use in the forestry sector that can be used for walking on slopes, etc., in collaboration with Sumitomo Forestry Co., Ltd., the Forestry Research and Management Organization’s Forestry and Forest Products Research Institute, and Nara Institute of Science and Technology.

End poverty in all its forms everywhere (1.a)
Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation (9.1, 9.2, 9.4, 9.c)
Make cities and human settlements inclusive, safe, resilient and sustainable (11.2, 11.3)

Promotion of port container terminal operations (Indonesia), international cargo terminal operations at Haneda Airport (Japan), co-generation business (Thailand, Brazil), and other infrastructure business around the passenger railway business. (9.1)
Contribution to the creation of a better quality of life by expanding transportation choices through car-sharing (Singapore). (9.1)
Provision of stable transportation by helping railway companies to improve their operational efficiency through rolling stock leasing (U.S., Europe, Russia, and Brazil). (9.1)
Transportation cost reduction for grains, fertilizers, steel products, etc. through general freight transportation services (Brazil). (9.1)
Promotion of safe and reliable passenger transportation services by developing, improving and increasing the efficiency of urban transportation infrastructure networks in the passenger railway business. (9.1)
Achievement of remarkable logistic improvements through the construction of dedicated freight corridors (India). (9.1)
Establishment of the Group Management Framework Dept. as an organization providing services across the automobile related business segments. (9.2)
Reinforcement of the governance system for the entire Mitsui & Co. automobile group subsidiaries and contribution to the realization of a sustainable automobile industry by developing management personnel succession plans for Mitsui & Co. automobile group subsidiaries, and developing and hiring of human resources from a medium- to long-term point of view. (9.2)
Promotion of natural gas distribution business (Mexico, Brazil) and power generation business using gas-fired power generation and renewable energy sources (20 countries) in various countries. (9.4)
Participation in mini-grid business to distribute electricity to residents in remote areas, thereby making contributions to the enhancement of their quality of life (India). (9.4)
Contribution to the realization of a longer product lifespan for cars by increasing the transparency of auto body repair and maintenance operations of general auto body shops through the development and sales of operating systems for these shops (India). (9.4)
Provision of assistance in the introduction of safe and fuel-efficient aircraft through the leasing of aircraft. (9.4)
Promotion of the enhancement of people's quality of life and economic development in Africa by bringing about a positive spillover of "food and agriculture" and infrastructure business through the investment in ETC Group. (1.a)
Promotion of tank terminal business at world-renowned distribution collection sites that serve as a basic distribution infrastructure for the petrochemicals industry (U.S. and Belgium). (9.1)
Promotion of an urban development project through Mitsui & Co. Real Estate Ltd. that contributes to the improvement of urban functions through the creation of harmonious streetscapes, the enhancement of local disaster-preparedness, the stimulation of community and business activities, and the installation of facilities that will help to enhance community (Japan). (11.3)
Offering of new lifestyles through TV shopping business (Japan, India, China), meal kit business (Russia), and IT-based one-stop renovation service business (Japan). (9.4)
Expansion of communications services in developing countries and providing assistance in the strengthening and expansion of related services through participation in a major telecommunications business (Cambodia). (9.6)
Promotion of new mobility services that utilize autonomous driving technology, such as the supply of autonomous shuttle buses through a collaboration with SB Drive (Japan). (11.2)

- Support for short-term training programs in Japan for university students from Australia and Russia, and high school and university students from Myanmar (40 trainees) (4.5)

- Implementation of AGUSAKU (Education for Sustainability), which aims to develop children’s powers to create a sustainable future” at AGUSAKU Academy and Mitsui’s forests (71 participants in total) (4.7)

- Provision of scholarships and accommodation for overseas students in Japan through the Mitsui Bussan Trade Promotion Foundation (10 participants) (4.9)

- Support for Indonesian students in Japan through the Mitsui Bussan Trade Promotion Scholarship Program (10 participants) (4.2)

- Implementation of the Young Professional Leadership Program for Japanese and U.S. professionals through participation in the TOMODACHI Initiative arranged by the U.S. government and other organizations (80 participants in total: from Japan and the U.S.) (17.17)

- Continued implementation of Mitsui endowed lecture programs at Peking University, Fudan University, University of Warsaw, and University of Sao Paulo (10 times) (17.17)
Mitsui & Co. continues to contribute to the enhancement of people’s quality of life through its business activities in such areas as electric power, water treatment, water supply and sewerage systems, logistics, railroads, healthcare, and communications, by developing infrastructure that is essential for the growth and advancement of countries around the world and local communities.

In the area of electric power and renewable energy, while we engage in power generation and gas distribution, we recognize the reduction of greenhouse gas emissions as a material issue and are reinforcing our environmental business, such as solar photovoltaic and solar thermal power projects, wind power projects, and biomass-related plant projects.

There is a growing need for improvements in convenience and safety, against the backdrop of growing population, rising living standards, and changing lifestyles. Mitsui is responding to that need by developing and operating sewage and water supply systems and wastewater treatment facilities, and by engaging in urban development projects, such as the development of logistics and industrial facilities, especially seaport and airport projects, and smart city development projects, to respond to changing societal needs.

In the Mobility domain, with regard to ship business, Mitsui is focusing on vessel ownership and operation and the LNG carrier business, to adapt to tighter environmental regulations and growth and change in maritime cargo traffic. As for railroads, which form a major artery for land transportation, we export freight cars and related facilities and undertake rail transportation infrastructure projects using Japanese institutional finance. Other business activities in this area include rail leasing, the general freight business, and passenger transportation.

Mitsui also promotes the utilization of ICT in such areas as high-speed communications, electronic settlements and other communications and service platform businesses, especially in emerging countries, aiming for the enhancement of quality of life and social infrastructure. At the same time, in our effort to build new social systems, we strive to create new business, including medical healthcare services, agriculture, and energy management.

Ensuring Safety and Consumer Confidence

The Consumer Affairs Agency was established in September 2009 in order to promote measures to protect and enhance consumer benefits and deliver a society where every consumer can enjoy a safe, secure and high-quality life. Likewise, Mitsui is also well aware of that consumer safety, confidence and security are of major importance in conducting its business.

With such concerns in mind, we have established the Consumer Product Handling Policy and Consumer Product Handling Regulations, and each individual business unit has also established detailed rules to ensure the appropriate handling of consumer products.

Moreover, in the foods area, Mitsui works to secure food products for supply to Japan, which has the lowest food self-sufficiency rate among the industrialized countries. The Food Business Unit Food and the Food & Retail Management Business Unit place maximum priority on food safety and security and, accordingly, have established internal rules and internal committees for food sanitation and developed a food-safety database, which includes overseas production processes.

To manage risks associated with food safety and security, we have been implementing food safety seminars for Mitsui employees, as well as for our affiliated companies, in order to reinforce traceability through appropriate labeling that indicates the country of origin, product quality, product grade, and other key information.

Mitsui puts consumer safety and security first for all items it handles, not just consumer products and food.

The Consumer Product Handling Policy

Placing More Emphasis on the Consumer and Ensuring Product Safety

Whether engaging in manufacturing, importing, or domestic marketing of consumer products, Mitsui reaches beyond its goal of providing products that offer cost savings or superior performance, and thereby additionally emphasizes a consumer-oriented approach by which the utmost priority is placed on handling safe products that consumers can use with total confidence. This policy is aligned with our management philosophy comprising our Mission, Vision and Values (MVV).

Developing and Operating a Risk Management System

To ensure that the Consumer Product Handling Policy functions in practice, we have developed a sound risk management system and are working to maintain and improve systems used in collecting, disseminating, and disclosing information on accidents involving products, and arranging for product recalls in the event of product-related accidents.
Today’s increasing trend towards globalization, advances in IT, and other developments in society have brought considerable diversity and change to the world we live in; as we pursue greater convenience and enrichment in our lives, we also face a broad range of issues, including global warming and other environmental problems, poverty, and educational inequality.

Mitsui & Co. works to address local and global societal issues through various social contribution activities. Mitsui’s Operational Guidelines for Social Contributions Policy specify three areas of focus: international exchange, education, and environment. Within these three areas, Mitsui utilizes its strengths and knowhow by focusing its social contribution activities on multicultural symbiosis, human resource development with an international perspective, and the global environment. By continuing our initiatives in these fields, working together and sharing them with society, we believe our activities will have follow-on effects that will lead on to solutions to larger-scale social issues.

In addition, we are planning and promoting volunteer programs with the hope of building interest and sensitivity towards social issues amongst our executives and employees and management personnel.

**Guiding Principles**

We will build a congenial relationship with our stakeholders by striving to create a harmony with the global community and local communities in accordance with the Mitsui & Co. Management Philosophy (Mission, Vision and Values), and we will actively contribute to the creation of a future where the dreams of the inhabitants of our irreplaceable Earth can be fulfilled.

**Action Guidelines**

1. In order to respond in an appropriate manner to the needs of the global environment, and of international and regional society, Mitsui actively promotes social contributions.
2. Mitsui will establish the three important areas of ‘International exchange’, ‘Education’ and ‘Environment’ for its social contributions, and will implement social contribution activities befitting of Mitsui & Co.
3. In addition to the making of economic contributions, such as donations etc., Mitsui also aims to carry out proactive social contributions that involve the participation of its executives and employees.
4. Mitsui promotes social contributions with an emphasis on transparency and accountability in respect of its stakeholders. It also aims for the continued improvement of activities through communication and cooperation with its stakeholders.

**Social Contributions (FY 2017)**

The total social contribution expenses for the fiscal year ended March 2018 was 1.49 billion yen.

*Figures include cash donations, payments in kind, activities by employees, free use of company facilities. However, activities such as donations and volunteer activities that employees personally did not include.*
Global social contribution activities (International exchange, Education)

- Scholarship and Training in Japan
- Mitsui-endowed Lecture Programs and Support to the University
- International Exchange

- Employee Volunteers
- Mitsui-endowed Lecture Programs and Support to the University

Sustainability Report 2018

Enhancement of Local Industrial Bases & Quality of Life
**Support for the Brazilian Community in Japan**

Many Japanese-Brazilian families have come to Japan since Japan’s Immigration Control and Refugee Recognition Act was amended in 1990. However, various issues have arisen, including problems in the education environment. Many children* have been unable to keep up with school classes because of the difficulty in learning the Japanese language, while others have been unable to attend school for economic reasons. As a company with extensive business operations in Brazil, we provide the following support to foster reciprocal understanding between Japan and Brazil and find solutions to issues affecting the Brazilian community in Japan.

*According to a Ministry of Education, Culture, Sports, Science and Technology survey on the societal integration of foreign children requiring Japanese language lessons, 20.6% of the 43,977 children who need Japanese language tuition are speakers of Portuguese (fiscal 2016).

### Scholarship Program for Brazilian Schoolchildren in Japan

In 2009, we established a scholarship program for families that were finding it difficult to afford tuition fees at Brazilian schools. In the fiscal year ended March 2018, a total of 453 students received scholarships to attend 26 schools.

### Extracurricular Classes

Since 2014, we have supported extracurricular classes for children attending Brazilian schools in Japan. The aim is to foster understanding about the value of learning and work by enabling schoolchildren to interact directly with working people. In the fiscal year ended March 2018, our employees gave six classes and welcomed approximately 200 children.

### Other Support Activities

We have been holding informal meetings to discuss how to ensure a better future of Brazilian children (21 meetings in the fiscal year ended March 2018), and providing support for NPOs and other organizations (14 organizations in the fiscal year ended March 2018).

### Contributing to Global Human Resource Development through Mitsui-endowed Lecture Programs at Overseas Universities and Training in Japan

We are working to foster reciprocal understanding with young leaders of the future and contribute to human resource development on a global scale through Mitsui-endowed lecture programs at universities in countries and regions where it is engaged in business activities. Mitsui also runs programs that provide opportunities for training in Japan.

In Russia, Mitsui established endowed lecture programs at St. Petersburg University in 2007 and the Diplomatic Academy of the Russian Ministry of Foreign Affairs in 2016. We also started a Japan studies program for students of both institutions in 2015. In the fiscal year ended March 2018, four university students participated in the Japan studies program, visiting Tohoku, Hiroshima, and other locations and attending a training course about the history, culture, economy, and technology of Japan, as well as disaster recovery activities. Moreover, every year eight university students selected from Australia participate in a three-week study tour of Japan through the Mitsui Educational Foundation, which was established in Australia in 1971. Study tours of Japan were also provided for 16 students from the University of Yangon and high schools in Myanmar.

Mitsui has also endowed lecture programs in the United States, China, Brazil, Vietnam, and Poland.

**TOMODACHI-Mitsui & Co. Leadership Program**

Mitsui has been participating in the TOMODACHI Initiative, a public-private partnership program led by the U.S. government and U.S-Japan Council to foster the development of young people who will contribute to the strengthening of Japan-U.S. relations in the future, since the foundation of the initiative.

In 2013, we launched the TOMODACHI-Mitsui & Co. Leadership Program. In the fiscal year ended March 2018, 20 selected young leaders working in the industrial and government sectors in Japan and the United States were given the opportunity to visit each other’s countries. With the program themes of leadership, innovation, and the entrepreneurial spirit, participants networked among themselves, visited various locations, and broadened their perspectives as next-generation global leaders through dialogue with top executives from the government sector, industry, and with young leaders. These experiences help them to strengthen their activities and initiatives in various fields and build diverse human networks. Furthermore, with the aim of developing leaders who can drive the reconstruction process, we encouraged potential leaders in the three prefectures affected by the Great East Japan Earthquake to participate in Japanese delegations, and also created opportunities for networking with American delegations visiting the earthquake-affected areas. Through these activities, we aim to create new jobs in disaster reconstruction activities and tackle various issues, such as the promotion of inbound tourism and revitalization of industry, supporting the recovery of earthquake-affected communities. A cumulative total of 99 people have participated in the Japanese and American delegations.

### Other Activities

**Solidarity of International Judo Education, Japan SAMBO Federation**

In 2009, we established a scholarship program for families that were finding it difficult to afford tuition fees at Brazilian schools. In the fiscal year ended March 2018, we have given the opportunity to visit each other's countries. With the program themes of leadership, innovation, and the entrepreneurial spirit, participants networked among themselves, visited various locations, and broadened their perspectives as next-generation global leaders through dialogue with top executives from the government sector, industry, and with young leaders. These experiences help them to strengthen their activities and initiatives in various fields and build diverse human networks. A cumulative total of 99 people have participated in the Japanese and American delegations.
**Mitsui Bussan Trade Promotion Foundation (Scholarships for Overseas Students and Other Activities)**

The Mitsui Bussan Trade Promotion Foundation was established in 1927. In 1989, as an international exchange support, the foundation started scholarships for overseas students and lent the grant of lodging facilities free of charge, mainly to support international students from Asia.

**Mitsui Bussan Scholarship Program for Indonesia**

Opportunities for higher education are limited in Indonesia, and only 30% of students advance to university. Mitsui has built a close relationship with Indonesia through business. In 1992 we established the Mitsui-Bussan Scholarship Program for Indonesia with the aim of nurturing talented human resources who can contribute to the further reinforcement of relations between Indonesia and Japan. Since then, we have selected two Indonesian high school students each year for a six-year program, which means that we are continuously providing support for a total of 12 students in a six-year period. The year 2017 marked the 25th anniversary of our Scholarship Program for Indonesia, up to that point of time a total of 42 people had been accepted under the program. We also operate scholarship programs to assist university students in Myanmar and Mozambique. Scholarship programs are also operated by the Mitsui Bussan Trade Promotion Foundation and the Mitsui U.S.A. Foundation.

**Support for the Improvement of the Educational Environment in Myanmar**

We provide seamless support for the improvement of the educational environment in Myanmar at all levels from elementary to higher education.

- Support for elementary education through participation in elementary school construction by the Myanmar Terakoya Support Team
- Support for short-term training for high school students in Myanmar
- Agriculture seminar at Yezin Agricultural University
- Scholarship support for Myanmarese students at the Tokyo University of Agriculture

**Mitsui SASUGAKU Academy 2017**

Mitsui launched “SASUGAKU” course (education for sustainable development), which help children who will play a very important role in creating a sustainable future to develop their capabilities of learning, thinking, and communicating. We designed Mitsui SASUGAKU Academy in 2014, which is a 5-day capacity-building program for about 30 primary schoolchildren in upper grades, and uses our global business activities as teaching materials.

The theme for 2017 was the “The Future of Food—What will we be eating in 2050?” Participants thought about issues and solutions relating to food in imaginary future cities with various characteristics, such as a “desert city” and a “space city”. During the learning time, participants actually tried “Beyond Burgers” made from plant protein, which is handled by Mitsui. They also heard presentations from our employees about land-based trout farming and the tooth-decay prevention capability of the L8020 lactobacillus. Through these activities, children learned the importance of meeting the challenge of societal issues. On the final day, each group presented the results of their activities during the five-day program.

As a result of presentations at academic conferences and other venues, these sustainability education initiatives by Mitsui have attracted considerable interest and praise as progressive examples of education for sustainable development (ESD). In the fiscal year ended March 2018, the program was selected by the Japan Association for Human and Environmental Symbiosis for its environmental activity award, and also won the Judging Panel’s Incentive Prize in the Corporate Youth Experience Promotion Awards of the Ministry of Education, Culture, Sports, Science and Technology.

**Japan Little League Baseball Association**

Since 1970, we have been supporting the Japan Little League Baseball Association, which aims to instill good citizenship in boys and girls, contributing to their healthy physical and mental development as international citizens through team play in the sport of baseball.
Contribution to Developing People with an International Mindset

Disaster Relief Assistance

When disasters occur in Japan and overseas, Mitsui provides various forms of support to prevent the expansion of damage and contribute to the earliest possible recovery in the affected areas. We provide donations as a company and collect voluntary donations from our employees, as well as through voluntary activities by our employees.

Mitsui's Disaster Recovery Support Activities in FY 2017
- Flooding in Peru, rainstorms in northern Kyushu, Hurricane Harvey in the US, earthquakes in southern and central Mexico

Fostering Future Leaders to Drive Reconstruction in the Tohoku Region
In coordination with the Reconstruction and Revitalization Period designated by the government in its reconstruction plan for areas affected by the Great East Japan Earthquake, Mitsui is promoting measures to foster future leaders who will drive the reconstruction process, in collaboration with government agencies and NPOs. Mitsui & Co. is working with government agencies and NPOs to educate a new generation of people to drive reconstruction in the Tohoku Region.

The "Textbook for Our Future Š For Our Children" Visiting Lecture Project was launched in 2014. Under the program, people who actually appeared in "Textbooks for the Future", a documentary about disaster reconstruction produced by Mitsui's subsidiary World Hi-Vision Channel, Inc., visit schools in disaster areas as teachers for a day. They hold classes that encourage children to think about regional revitalization and community contribution through their choice of future careers and occupations. The classes have been held at a total of 25 schools, mostly in Iwate, Miyagi, and Fukushima prefectures. Around 3,500 children have participated.

We are also supporting a conversational English teaching project for junior and senior high school students at a "Collaborative School", an extracurricular school, run by the certified non-profit organization Katariba since 2014 in the town of Onagawa, Miyagi Prefecture.

In order to expand students' interest in and knowledge of the world's different cultures and value systems through English, we support online video lessons in spoken English, short-term study travel within Japan, and the Career Study Program supported by our employee acting as voluntary instructors. To date, 86 junior and senior high school students have participated.

Employee participation

Mitsui Global Volunteer Program (MGVP) and Volunteer Activity Leave
We have implemented the Mitsui Global Volunteer Program (MGVP) since October 2009. The aim of the program is to encourage all employees to participate with a sense of unity in various social contribution activities that lead to the solution of societal issues. Under the MGVP, we provide matching donations every year based on the number of participants in voluntary activities to NPOs and NGOs dedicated to the solution of a societal issue.

In 2017, Plan International Japan opened a nurses’ hostel in Ghana’s Central Region, using funds donated by Mitsui in the fiscal year ended 2016. The support provided by us has helped to enhance public health and medical services in Ghana.

Since the establishment of the matching donation program, Mitsui has donated approximately ¥29 million to eight organizations. We have also established a volunteer leave system to encourage employee participation in social contribution activities.

Other Activities
Table For Two (TFT), creation of foreign-language picture books, home stay program for Chinese students, Kanda Festival

Disaster Relief Activities
- Flooding in Peru, rainstorms in northern Kyushu, Hurricane Harvey in the US, earthquakes in southern and central Mexico

Fostering Future Leaders to Drive Reconstruction in the Tohoku Region

Human Rights Initiatives

Conducting business globally in many countries and regions of the world, Mitsui & Co. considers the protection of human rights in accordance with international standards to be its sustainability management platform. Mitsui’s Basic CSR Policy states, “make prudent efforts to understand the culture, traditions, and customs of countries and regions around the world” and “recognize the significance and importance of the human rights contained in international standards”.

The “Business Conduct Guidelines for Employees and Officers of Mitsui & Co., Ltd.” prescribe and require Mitsui employees and officers to observe: full consciousness of their role as members of international society; understanding of and respect for the cultures, customs, and history of individual nations; protection of human rights; and eschewing any form of discrimination based on race, creed, gender, social status, religion, nationality, age, or physical or mental ability. Furthermore, regarding measures to prevent any kind of discrimination and sexual harassment, we are raising employee and officer awareness by providing compliance seminars and other opportunities tailored to each job level.

We also support various international standards, such as the Universal Declaration of Human Rights and the ILO (International Labour Organization) Declaration on Fundamental Principles and Rights at Work.

Universal Declaration of Human Rights

The Universal Declaration of Human Rights is a common standard of objectives for all peoples and all nations to respect human rights and freedoms. The Declaration was proclaimed on December 10, 1948 at the third United Nations General Assembly and occupies an important position in the history of human rights.

Following this declaration, the International Covenant on Economic, Social and Cultural Rights (CESCR) and the International Covenant on Civil and Political Rights (ICCPR) were adopted by the 21st United Nations General Assembly on December 16, 1966. They both recognize the majority of the rights indicated in the Universal Declaration of Human Rights. Japan ratified both treaties in June, 1979.

Mitsui supports the Universal Declaration of Human Rights, CESCR and ICCPR.

Respecting Indigenous Peoples

When conducting operations, Mitsui strives to comply with all laws of the applicable country or region, and to respect the human rights and cultures of its indigenous peoples in accordance with international standards such as the United Nations Declaration on the Rights of Indigenous Peoples and the Convention concerning Indigenous and Tribal Peoples in Independent Countries (ILO Convention: C169).

For example, in our forest resources business for pulp and paper manufacturing in Australia, we are exercising due diligence by assessing the level of impact that Mitsui’s projects might have on the indigenous Aboriginal population. As part of our research into available solutions in the event that any problems are discovered, we conduct advance surveys from the viewpoint of cultural protection to ensure that our operations will not destroy Aboriginal historical sites. In our iron ore mining operation in Brazil, we maintain close communication with the indigenous people living in the Amazon to foster mutual respect.

In Japan, Mitsui has entered into agreements with the Biratori Ainu Association and with the town of Biratori in Hokkaido, where a part of Mitsui’s forests is located to cooperate in activities to protect, and pass on Ainu traditional culture through the conservation of forests.
Guidelines for Appointing a Security Firm

The UN Code of Conduct for Law Enforcement Officials was adopted in December 1979 so that the UN can promote and ensure that law enforcement authorities such as the police and the military in member countries take on appropriate roles as well as respecting and protecting human dignity. The Principles on the Use of Force and Firearms by Law Enforcement Officials was also adopted in August/September 1990 as the standard for the use of force and firearms by law enforcement officials. Mitsui bases its appointment of security firms on these codes of conduct and principles.

Management System for Human Rights and Labor Conditions

Mitsui & Co. conducts an internal survey in alternate years concerning compliance with the UN Global Compact, to raise the awareness of management and employees regarding human rights and labor issues at its business units, corporate staff divisions, and domestic and overseas organizations (branch offices and consolidated subsidiaries).

1. Do you fully understand the UN Global Compact?
2. Have there been any violations of the 10 principles of the UN Global Compact? If so, report the details of the violation and what measures were taken to handle the situation.

As a consequence of this survey, if it is found that we have a unit, a division, or an organization that materially lacks an understanding of the UN Global Compact, we will take measures, such as providing additional training seminars.

In addition, we continue to hold e-learning courses and other training activities to remind employees of the importance of addressing and managing risks related to human rights and labor problems in the supply chain.

With regard to our main suppliers, we promote initiatives for improving our supply chain management by conducting supplier surveys which involve sending out questionnaires and carrying out on-site surveys based on a checklist. In the fiscal year ended March 2018, we sent questionnaires to 68 of our suppliers, and conducted on-site surveys at the plants of our supplier of oleochemical product. Through these surveys, we confirmed their compliance with our Supply Chain CSR Policy, which covers human rights, labor conditions, and other aspects.

Moreover, through our participation in working groups of Global Compact Network Japan, such as the Human Rights Due Diligence (HRDD) Working Group, we are able to keep up-to-date with international trends related to human rights, and can make use of the information we obtain from other companies to enhance our sustainability promotion activities.

We continue to deepen our awareness of human rights and labor issues in reference to international guidance, such as the UN's Guiding Principles on Business and Human Rights, by measures such as inviting outside experts to hold seminars.

- **Company**
  - We carry out diversity management initiatives to enhance our corporate competitiveness by fully mobilizing our employees from a wide variety of backgrounds in terms of nationality, gender, values, and other attributes. In order to continue evolving our diversity management initiatives, we review our traditional work styles from the perspectives of productivity and efficiency, and promote “Work Style Innovation” by implementing new measures as necessary. In addition, we implement measures for human resources development, environment creation, and awareness raising in order to build a corporate climate and culture that can realize diversity and inclusion, which means accepting and respecting diversity.

- **Corporate Governance & Human Resources**
  - We implement measures to ensure a work environment wherein our employees can exercise their abilities to the utmost and can continue to work in safety and good health.
In 2004, Mitsui & Co. established the CSR Promotion Committee (currently the Sustainability Committee) under the Corporate Management Committee to develop Mitsui’s internal framework with respect to sustainability, and to work to raise sustainability awareness among employees.

Reflecting the growing interest in the UN Sustainable Development Goals (SDGs) and ESG investments in recent years, we established the Sustainability Committee on May 1, 2017 in order to further clarify our unchanging stance toward creating new value for society through business activities and to pursue further mutual sustainability between society and the company.

With the Sustainable Committee playing a central role, Mitsui promotes sustainability-related activities based on cross-organizational collaboration to meet the needs and expectations of society in relation to companies’ social values and initiatives.

As a measure to facilitate planning and promotion of sustainability activities, such as supporting the practice of sustainability management and raising sustainability awareness at each organization, together with the staff in the workplaces of each unit, we continue to appoint Sustainability Promotion Officers in each of the corporate staff divisions, Headquarters business units, overseas regional business units, and domestic offices, and we are continuing to build our internal network.

In the fiscal year ended March 2018, Sustainability Promotion Officers meetings continued to be held quarterly, at which we shared new policies relating to our sustainability initiatives and other important information discussed and formulated by the Sustainability Committee, and gave reports on surveys and measures related to supply chain management. In addition, working group meetings were held to consider society’s needs and expectations, and our responsibilities to society, using case studies of Mitsui’s business from the perspective of Mitsui’s identified materiality. We held seminars on ESGs, as well as workshops on materiality and SDGs in order for employees to personalize societal issues as their own individual challenges.

Moreover, Mitsui Sustainability Promotion Officers in business units and corporate divisions have taken the initiative in organizing various sustainability awareness-raising programs, such as in-house sustainability seminars and lectures by people from partner companies and external experts, and sustainability-themed workshops based on employees’ day-to-day work. In this way, we are urging employees to consider sustainability issues in their everyday business.
The Sustainability Committee, which was launched in May 2017, assumes a stronger and broader role than its predecessor, the CSR Promotion Committee. It submits proposals to the Corporate Management Committee regarding sustainability-related management policies and business activities (identifying risks and opportunities in business) and company-wide policies relating to the environment, conducts deliberations on effective information disclosures to stakeholders, incudes the importance of sustainability management throughout the Company, makes proposals in relation to Specially Designated Businesses, and engages in other sustainability related matters.

The committee's chairperson is the executive officer in charge of corporate staff divisions (overseeing the Corporate Planning & Strategy Division), and its deputy chairperson is the executive officer in charge of corporate staff divisions (overseeing the Human Resources & General Affairs Division and the Legal Division). The general managers of each corporate staff division — the Corporate Planning & Strategy Division (secretariat), the Investor Relations Division, the Corporate Communications Division, the Human Resources & General Affairs Division, the Legal Division, the Investment Administrative Division, and the Environmental & Social Contribution Division - serve as committee members. The committee has the following duties:

1. Develop basic policies on the company’s sustainability management and fundamental plans for activities to promote sustainability and CSR.
2. Review and make proposals on the company’s management policies, as well as policies and strategies of the business units and corporate divisions from the viewpoint of sustainability.
3. Present proposals on company-wide environmental policies.
4. Make proposals on sustainability-focused business activities (understanding risks and opportunities involved in business).
5. Deliberate on the effective disclosure of information to stakeholders, and the content, methods, and means of transmission thereof.
6. Consider and present proposals relating to progress reviews and monitoring required for management.
7. Configure and establish the internal structure for promoting sustainability management of the company.
8. Identify the material issues to focus on each year for promoting sustainability and CSR activities of the company and ensure progress on these.
9. Respond to issues related to sustainability and CSR, both internal and external to the company.
10. Decide and report whether to support individual proposals which qualify under the matters of Specially Designated Business, and indicate the necessary cautions for projects that will be supported.
11. Approve important matters (basic policies, business plans, etc.) relating to the Mitsui & Co. Environment Fund.
12. Select the proposals from internal applicants for grants provided by the Environment Fund.
13. Select the proposals from external applicants for grants provided by the Environment Fund.
14. Decide and report whether to support an exceptional acquisition of forests or the disposal of company owned forests, which is out of the scope of the Guidelines on the acquisition of a new forest and disposal of company owned forests, based on Rules on the Management of Company Owned Forests.

Furthermore, the Environmental & Societal Advisory Committee has been established under the Sustainability Committee. Committee members are selected mainly from among external experts who are familiar with a broad range of fields—including climate change, environmental restoration, environmental policy with respect to water and energy, etc., technology trends, human rights, and other matters—as well as attorneys and other knowledgeable individuals.

**Sustainability Committee Meetings in FY 2017**

**Meeting 1 (May 26, 2017)**
Debates on the sustainability initiatives in our business activities, the role and discussion themes of the Sustainability Committee, and a report on information disclosures in the Sustainability Report 2017 utilizing SDGs

**Meeting 2 (September 26, 2017)**
Discussions on the information disclosure policy based on the external environment, trends in environmental and climate change issues, and a report on the evaluation results for DJSI 2017 selection

**Meeting 3 (December 14, 2017)**
Deliberations on the expansion of disclosure of non-financial information, and a report on participation in COP23

**Meeting 4 (March 28, 2018)**
Report on our response to climate change issues, sustainability promotion activities, the results of our environmental and social contribution activities for the fiscal year ended March 2018 and plans for the fiscal year ending March 2019
ESG-Related Risk Management

Business opportunities and the risks associated with doing business have increased and are becoming more diverse due to economic globalization, progress in information technology, and the increasing awareness of the corporate social responsibility. Based on this understanding, Mitsui & Co. recognizes the necessity of comprehensively managing risk from both quantitative and qualitative perspectives, by responding appropriately to changes in social conditions and business models. With this awareness, we have designated the business domains listed in the table below, which have high qualitative risks, including risks related to the natural environment, society, and governance, as specially designated business, and we have been endeavoring to develop such businesses with due caution under our Specially Designated Business Management System. Specifically, when beginning new projects, we conduct internal assessments and, wherever necessary, approach the Sustainability Committee as well as the Environmental & Designated Business Management System. By business domain, 6 of these projects were the environment- and other knowledgeable individuals. In the fiscal year ended March 2018, 12 projects were individually assessed under the Specially Designated Business Management System. By business domain, 6 of these projects were the environment-related business, and 6 were the projects receiving subsidies. In this fiscal year, we conduct a comprehensive and well balanced management of risks on specially designated business at the earlier stage of business development process and up to the follow-up stage in view of the ESG investment with support from those units. Furthermore, we have established the Rules on ODA Business Management for promoting ODA business, which has a high public profile and, therefore, requires operation processes that are highly transparent. Under this system, as necessary, Mitsui’s ODA Projects Evaluation Committee considers these projects and engages in appropriate risk management practices.

### Business Domains Subject to Specially Designated Business Management System

<table>
<thead>
<tr>
<th>Business Domain</th>
<th>Key Points for Screening</th>
</tr>
</thead>
<tbody>
<tr>
<td>Environment-related business</td>
<td>- All business that have large impact on environments Examples: coal fired power plant business, offshore oil field business, etc.</td>
</tr>
<tr>
<td>Medical, healthcare and bioethics related business</td>
<td>- All business related to the fields of medical and healthcare, and that engage in the development of technologies relating to the human genome, genetic analysis, genetic recombination, and other relevant matters, or businesses that handle products to which these technologies are applied. Examples: Business with a high public profile in the medical and healthcare fields (a dialysis, pharmaceutical drug manufacturing business), development of new drugs using genetic analysis technology, etc.</td>
</tr>
<tr>
<td>Projects receiving subsidies</td>
<td>- All projects that directly or indirectly receive subsidies from governmental and administrative agencies within and outside of Japan.</td>
</tr>
<tr>
<td>Business harboring other unusual reputation risks</td>
<td>- Businesses that may be in conflict with public order and morality, Mitsui’s management philosophy, etc. and businesses with a high public profile. Examples: Business with sensitive personal information, social infrastructure businesses, etc.</td>
</tr>
</tbody>
</table>

### Reinforcement of Sustainability Governance

- Contribution of such business to the environment and society
- Measures to mitigate environmental impact (incl. Climate change, Biodiversity loss, Water risk)
- Safety assurance and work environment
- For development business, appropriate consideration and understanding of human rights belonged to local residents and other related parties
- Compliance with environmental laws, regulations and guidelines, etc.
- Ethical screening based on guidelines of three Japanese ministries (Ethical Guidelines for Human Genome and Genetic Sequencing Research in MEXT, MHLW, METI)
- Approval by the ethics committee of the research institute, acquisition of informed consent, checking of processes, etc.
Compliance Approach

Mitsui & Co. considers a sound reputation to be the foundation of business, and recognizes that compliance is the prerequisite for maintaining our reputation and trust from society. In order for the Mitsui & Co. global group to become a truly trustworthy corporate group for society, we make serious efforts to heighten awareness among all officers and employees of the importance of upholding "Integrity" and to build a global-group compliance framework. "Integrity" here means more than compliance with laws, regulations and rules, and it refers to an employee's ability to act honestly and ethically with a high degree of dignity and respectability, to use good judgment in connection with his/her business activities, and to behave with common courtesy and in accordance with business ethics and social norms.

Building a Better Compliance Framework

Business Conduct Guidelines for Employees and Officers

The “Business Conduct Guidelines for Employees and Officers of Mitsui & Co., Ltd.” specify how every Mitsui employee and officer should act in his/her daily activities, from the perspective of compliance with laws and regulations, internal rules, and corporate ethics. The Business Conduct Guidelines help us fulfill our corporate social responsibility (CSR) and gain the trust of our stakeholders. They have been revised from time to time since their establishment in February 2001, to reflect the changes of the times.

To ensure that all our employees develop a proper understanding of the Business Conduct Guidelines, we implement training and e-learning courses, and at the same time, we require all employees to pledge to comply with the Business Conduct Guidelines. Likewise, each our global group company has formulated and implemented its own individual business conduct guidelines, based on the "Business Conduct Guidelines for Employees and Officers of Mitsui & Co., Ltd.", that suit its specific business activities.

In addition, we have put in place business conduct guidelines in our overseas business locations, reflecting the local laws and regulations, and customary practices of the countries in each region.

Compliance Framework

The Compliance Department of the Legal Division leads compliance-related initiatives on a global group basis under the direction and supervision of the Chief Compliance Officer (CCO) and in collaboration with the Compliance Supervising Officers appointed in each of Mitsui's domestic and overseas business units, and branches and offices. The objectives of these efforts implemented on the Mitsui & Co. global group basis are to: (i) heighten compliance awareness, (ii) improve and strengthen compliance programs, and (iii) respond to specific compliance issues as they arise.

In addition, the Compliance Committee has been established as a forum for discussions relating to the promotion of compliance with laws and regulations, and ethical standards across our global group as a whole. With the participation of external attorneys, the Compliance Committee discusses various issues that have arisen in the group, and discussion outcomes are made available on the company intranet.

Specific measures carried out include conducting thoroughgoing supervision at workplaces, implementing preventive anticorruption measures through the management of business entertainment for public officials and appointment of sales agents, strengthening systems to comply with applicable competition laws, strengthening business process controls, and promoting the rotation and movement of personnel. Such initiatives are implemented on an ongoing basis in order to prevent misconduct. With respect to anti-corruption, we have published...

Status of Compliance Incidents

In the fiscal year ended March 2018, there were no cases where Mitsui received any legal sanctions or paid any fines or financial penalties due to violations of anti-bribery laws or anti-competition laws. The total number of compliance-related incidents (except for harassment and minor work-related accidents and labor-related issues) at its Head Office, domestic and overseas offices and affiliated companies that were reported in the fiscal year ended March 2018 was 604. However, none of them had a material effect on the management of Mitsui and its affiliated companies.
Facilitating Communication and Improving the Internal Whistleblowing System

We believe that the essence of compliance lies in the continual efforts to develop an open working environment which embodies our management philosophy and values and facilitates transparent and smooth communication within the Mitsui & Co. global group.

In case some problem arises, a report must be immediately made to one’s superior or relevant persons, so that the problem can be properly addressed in a timely manner. Mitsui has established eight channels for raising compliance concerns, including internal reporting lines to external attorneys or third parties that promise anonymity. We have established the rules on a whistleblowing system which clearly stipulate that no employee will suffer any form of disadvantage for raising any compliance concern. Furthermore, we have made available to our group companies in Japan the use of Mitsui’s designated external attorneys and third parties as their external reporting channels to ensure a system in which issues emerged in our group companies can be reported with a sense of security, through the appropriate establishment and operations of the whistleblowing system. Furthermore, at our overseas offices and affiliated companies, our regional Compliance Supervising Officers are taking the lead in developing reporting and consultation channels, also taking into consideration local laws and regulations, as well as specific local customary practices at each country.

Furthermore, Mitsui began the introduction of the Global Group Hotline, a special whistleblowing hotline for reporting and seeking advice regarding cases that breach the laws of Japan or another country regarding anti-trust (monopoly) laws or anti-corruption laws, or cases that give rise to suspicion of such breaches. Under the system that is being put in place, the Compliance Department belonging to Mitsui’s head office Legal Division becomes a unified channel by which to receive whistleblowing reports from officers and employees of overseas trading affiliates, and other subsidiaries in Japan and overseas.

Effective Education and Training

Mitsui provides employees with a wide range of compliance training programs to promote a high degree of awareness of business ethics throughout the company and to ensure that all employees have the necessary skills and information available to them to ensure that work practices remain in compliance.

In the fiscal year ended March 2018, we provided such training for employees at all levels, including new employees and line managers, as well as for our employees being transferred overseas or being seconded to group companies. We also provides an extensive program of compliance training for officers and employees of group companies. In November 2017, we conducted “Compliance Review Week”, in which we held a seminar about compliance issues that everyone might encounter, in addition to sharing information and exchanging opinions. In addition, during the fiscal year ended March 2018, we provided lessons involving the Compliance Handbook for our employees, which explains the contents of the “Business Conduct Guidelines for Employees and Officers of Mitsui & Co., Ltd.”, and also conducted online testing to ensure that employees in Japan who had not taken the test last year understand the Handbook’s content. Through such activities, we are working to ensure that all management and employees have the compliance-related knowledge they need to conduct day-to-day business activities. Moreover, we distributed “Compliance Handbook for Mitsui & Co. Group Companies”, which was newly prepared last year to domestic group companies upon request. We also provide overseas offices and group companies specifically tailored compliance training that takes into account particularities of the regions in which they are located.
Compliance Awareness Survey
In order to understand the level of compliance awareness among officers and employees, we have conducted Compliance Awareness Surveys not only at Mitsui (non-consolidated), but on a global group basis, as needed. We utilize the survey results to address issues and implement a variety of measures to further promote compliance awareness.

Other Initiatives
In addition to the previously mentioned initiatives, we also visit individual key affiliated companies in order to ensure adherence to compliance at the global group level. By gaining a better understanding of compliance issues facing each company, we provide advice geared toward helping those companies autonomously design and implement compliance programs.

Throughout the fiscal year ending March 2019, we will strive to make compliance an integral part of daily work in our global group operations, by continuing to support group companies to help them develop and implement compliance programs more effectively, in order to instill the importance of compliance among their employees. For this, we will further deepen communication and information exchanges.

Global Tax Management Policy
We are committed to complying with our tax obligations and simultaneously managing our global tax costs. Our Global Tax Management Policy is available below.

Global Tax Management Policy
**Human Resources to Translate into Assets**

**Human Resources Approach**

Throughout its long history, Mitsui & Co. has placed great importance on certain values and philosophies, such as a “Focus on Human Resources,” “Challenge and Innovation,” and “Open-Mindedness.” In line with these values, we have always valued people and worked to train and develop diverse human resources who can contribute to society.

Our corporate mission is to: Strive to contribute to the creation of a future where the aspirations of people can be fulfilled. To achieve this mission, we will increase our efforts to instill these values and our organizational culture, which have led people to say that “Mitsui is people”, through human resource development activities for the approximately 42,000 people who work for the Mitsui & Co. global group.

The business environment is changing rapidly, and the future is difficult to predict. We are sharpening the abilities of individual personnel and exerting the high-level capabilities and expertise of Mitsui and its group companies, in order to increase the comprehensive strengths of the Mitsui & Co. group, and creating environments in which the diverse people who work for the group can work energetically. We believe these are the most important things to ensure that the Mitsui & Co. group can continue to create new value in this environment.

**Key Elements of Human Resources System**

Mitsui regards human resource management systems as tools that help every individual employee to work energetically and lead to the realization of the corporate mission and values. The basic philosophy stated above is reflected in the following priorities.

| 1. Recruitment of Diverse Human Resources | We will recruit well-balanced and highly creative people from diverse backgrounds. |
| 2. Human Resource Development | We will develop people who share the values of Mitsui & Co. and have leadership skills that enable them to take the initiative in realizing our management philosophy. |
| 3. Appropriate Appointment and Deployment of Personnel | We will appoint and promote optimal people from the Mitsui & Co. group’s global human resource pool. |
| 4. Diversity Management | We will implement measures and develop an environment in which diverse individuals can perform their tasks energetically at their full potential. |
| 5. Consideration for Working Environments and Health and Safety | We will create healthy and safe working environments in which employees can continue to work with confidence. |

Mitsui & Co. group companies will share the above approaches through the Mitsui & Co. Global Business Management Guidelines and by other means. We will formulate human resource systems, and recruit, train and appoint personnel on the basis of said guidelines, according to the particular circumstances of individual companies.
Human Resources Development

From their initial stages, employee training programs at the Mitsui & Co. global group were designed to foster human resources that are capable of global group management. Throughout its long tradition, Mitsui & Co. has always focused on human resources. Our approach to human resources development is represented in the company’s saying, “The individual builds the business, and the business cultivates the individual.” As the words signify, the company’s priority mission is to develop talented human resources by encouraging each individual to create business. Indeed, it would be no exaggeration to say that this is the company’s ultimate raison d’etre. For this reason, we regard on-the-job training (OJT) as the cornerstone of human resources development. We also implement comprehensive off-the-job-training programs in various forms to support and supplement human resources development through OJT.

Also, we have career counseling educational programs for universities and graduate students, including internship programs, “Challenge & Innovation” seminars, and round-table discussion meetings with our employees to learn and develop their career views and deepen their understanding of Mitsui’s business.

Human Resources Development Programs

Grade-based Training and Business Skills Training
To achieve the goal of fostering human resources capable of global group management, we have built a wide variety of human resources development programs for every grade of employees, from new employees to management-level employees. While we have set grade-based training programs, mainly to enable employees to learn Mitsui’s business mindset and leadership, we have also provided business skills training programs as well as professional training programs with the aim of enhancing our employees’ knowledge and capabilities in various fields. An introduction to each training program can be found on the company’s intranet, along with an explanation and overview of our human resources training policies, and we encourage our self-motivated employees to participate in these programs.

Global Training Programs
The Mitsui & Co. global group have numerous global training programs that are designed to enable employees to manage business on a global basis. Programs include Business School Dispatch (BSD), Foreign Language & Business Culture Trainee course (FLBCT), and Overseas Trainee Dispatch (OTD). We also dispatch middle management-level employees to MIT Sloan Fellows Program and Harvard Business School Global Management Academy (GMA).

GMA is the program aimed at training next generation of leaders with the capacity for global management and has been held in partnership with Harvard Business School. The scope of the participants in this program are headquarter hired staff (HS) members, non-headquarter hired staff (NS) members, and employees of Mitsui’s overseas group companies and business partners. For management-level employees, we send them to Executive Education (EE), which is a short-term MBA programs conducted at first-class business schools in Europe and the US.

Number of employees dispatched in Global Training Program (FY 2017)

181 trainees in 37 countries

Executive Education and GMA
56 trainees in 4 countries (FY 2017)

### Human Resources Development

We also focus on the development of human resources capable of taking responsibility for global group management, which is a key pillar of Mitsui's consolidated management.

In order to support human resources development at each group company, and the building of human networks, group employees in Japan are given grade-based training, through such courses as our General Manager Training Program, Department Manager Training Program, and New Hire Induction Training Program, in addition to the optional training programs including the “Bussan Academy” program.

Since 2002, we have offered employees of our overseas trading subsidiaries a well-developed program of both short-term and medium to long-term training at the Mitsui Headquarters. Short-term programs include JTP (Japan Trainee Program), GMP (Global Managers Program), and GLP (Global Leaders Program), which are offered as milestone training in three stages: the first few years after joining the company; prior to appointment as a general manager; and after appointment as a general manager. Medium to long-term programs are held for a period of one to three years, and include LBP (Japan Language and Business Program), which provides Japanese language lessons and practical business training, and BIP (Business Integration Program), which provides practical business training.

Mitsui and its group companies encourage employees to take on new challenges and to work hard with high motivation and enthusiasm, by supporting them also from the perspective of personnel appraisals. The objectives of conducting the appraisal process are not limited to enhancing employee understanding of Mitsui’s management philosophy and motivating employees to meet management objectives, or to provide input for fixing compensation or assigning new positions, but also to promote talent development through the appraisal process. Appraisal meetings are held periodically between employees and their managers, and employees receive comprehensive feedback on their performance and specific contributions. These meetings create an effective framework for human resources/personal ability development.

The appraisal system for headquarter-hired employees consists of 3 types of appraisal criteria: “Individual Competency Appraisal,” “Contribution Appraisal,” and “Organizational Performance Evaluation.” For the “Individual Competency Appraisal”, an appraiser makes comparative assessment on the competency of an employee with regard to other employees in the same appraisal group, and it is used for and reflected in decisions regarding employee promotion, job assignments, salary, and so on; in accordance with the cumulative points in the employee’s individual competency appraisals over the most recent 3 years. Having cumulative points from appraisals for 3 years, rather than a single-year appraisal result, avoids a one-time effect and allows appropriate appraisals as to how an employee has developed during the 3-year period, and for considering promotions. For the “Contribution Appraisal”, setting out appropriate targets is the premise for a fair appraisal. Superiors and subordinates must engage in in-depth discussions in order to share a common understanding of the established targets so that the targets will be challenging and acceptable to both parties. For the “Contribution Appraisal”, an appraiser assesses the value added to, and the degree of contribution made to, the company by an employee, as well as the degree to which the employee has taken on challenges to achieve a target. The purpose of the “Organizational Performance Evaluation” is to examine the degree of attainment and the progress made by individual business units on their respective business plans. The results of the Contribution Appraisal and the Organizational Performance Evaluation are reflected in the bonus.
Appropriate Appointment and Allocation of Personnel

Policy on Appropriate Appointment and Allocation of Personnel

People are the most important assets for the Mitsui & Co. global group. We aim to create a cycle in which our human resources can grow through opportunities for diverse experiences, while deepening their human networks, thereby creating opportunities for even better experiences.

Placing the Right People in the Right Positions

Every year, employees are given the opportunity to have dialogue with their superiors on the basis of the prescribed carrier development survey sheet. Based on the individual employee's characteristics, expertise and experience, we determine a policy for the development and utilization of our human resources and implement appropriate personnel assignments, in order to maximize the potential of our diverse, talented professionals and organizational strengths.

Swift and Flexible Reallocation of Human Resources

Re-allocation of Human Resources

Human resources are vital but finite management resources. Taking into account the external environment and the balance between our portfolios and profits, we agilely transfer and position our human resources to growth areas that we have defined as targets under our management policies. We are continually implementing human resource re-allocation measures to accelerate our business offensives.

In the fiscal year ended March 2017, we re-allocated approximately 30 people from resource areas into non-resource growth areas, such as "healthcare" and "nutrition & agriculture", in order to build a structure capable of generating stable profits without being impacted by resource prices.

In the fiscal year ended March 2018, we transferred approximately 70 people from administrative units to business units and affiliated companies, with the aim of streamlining administrative units and strengthening business frontline units.

Personnel Exchanges

At intervals of approximately two years, we exchange personnel among different units. Approximately 300 people have taken part in exchanges since the program was introduced in the fiscal year ended March 2010. The aim is to share and disseminate knowledge and specialist skills held by organizations and employees beyond organizational boundaries, and in so doing enable employees to fully employ the comprehensive strengths and the networks of the Mitsui & Co. global group, and to develop human resources with broad perspectives.

Young employees up to four or five years experiences are transfered to domestic branches and offices under our Career Development Program designed to accelerate growth through contacts with customers at the business frontlines.

Training and Transfer to Japan
NS personnel selected for training as next-generation leaders are sent to Japan in various ways. They are given opportunities to study the Japanese language and Japanese business practices and experience Japanese work styles, while learning other aspects of Japan, such as its culture and history. Their training is targeted toward their development as management personnel who will one day play key roles in Mitsui & Co. global group management. In addition to opportunities to network with people within and beyond Mitsui, the program is also designed to enable participants to build lifelong relationships by inspiring and being inspired by other talented people who are gathered in Japan for the same purpose. Total of 159 people have participated in various training programs in Japan since the fiscal year ended March 2014. Mitsui will continue to implement these programs going forward.

Promotions to Executive Positions
An increasing number of talented locally hired employees (NS) are being promoted to managerial positions, in line with our commitment to training NS personnel in each region and strengthening our pool of human resources and locally-originated business. In the past, most people appointed to managerial positions as general managers (GMs) in overseas offices were sent from Japan. As result of coaching and training NS personnel, as well as providing opportunities for assignment to Japan and for global training, and other initiatives, the percentage of GM positions held by NS personnel has reached 31% in the Americas, 24% in EMEA (Europe, the Middle East and Africa), and 8% in the Asia Pacific region (as of March 2018). We will strengthen our efforts to achieve optimal personnel allocation, including Headquarters-hired staff (HS), as part of the continuing globalization of human resources in the Mitsui & Co. global group. The number of NS general managers is expected to exceed 100 by the fiscal year ending March 2020.

Transfers between Overseas Countries
Appointing personnel with a thorough knowledge of each country and region is essential to developing business with deep local roots, in order to capture every business opportunity while adapting flexibly to business environments in which change is the norm. We are driving further diversification forward to ensure that the right people can work in the right places on a global basis, regardless of nationality or location of recruitment. We are increasingly providing employees with opportunities not only for training in Japan, but also transfer to other overseas offices, including offices in other countries in the same region. Recent examples include the transfer of staff from India and South Korea to Dubai in the Middle East. We will continue to support the globalization of human resources in the Mitsui & Co. global group, while verifying the effectiveness and merits of this policy.

Promoting Diversity Management

Mitsui & Co.’s Diversity Management Vision

Building an environment that allows every member of our diverse human resources to display his or her potential to the full
In order to deal with a variety of changes in an increasingly volatile global business environment, it is important that we secure a wide range of human resources with diverse values so that we can respond to various changes and regard risks as business opportunities. This is why the people who work for the Mitsui & Co. global group come from a wide variety of backgrounds in terms of nationality, gender, values and other attributes.

We implement diversity management initiatives to enhance the competitiveness of the Mitsui & Co. global group. This is achieved when each and every member of our diverse human resources recognize and respect each other, stimulate each other to come up with ideas, bring new value to our business, and create innovation. This will allow us to evolve as a company within which people can generate new value in business.

Specifically, we strive to build a foundation on which we can realize this vision, primarily through the sharing of our management philosophy, by fostering a corporate culture that seeks to fully utilize diverse individual characteristics, by broadening employees’ mindsets, and by creating and continually reviewing work-related systems to support diversity. At the same time, we train and develop diverse human resources on a group basis, and work to enhance our corporate competitiveness by realizing the full strategic mobilization of our diverse workforce.

The Diversity Management that Mitsui Is Aiming For

- Development of personnel who promote innovation with strong capabilities for flexibly adapting to and coping with changes in an environment characterized by the globalization of business activities and expansion of business domains.
- To be a company that can attract human resources, draw out the individuality, and maximize potential of each and every employee.

The Diversity Management Framework

Building an environment that allows every member of our diverse human resources to display his or her potential to the full

Objectives

- Development of personnel who promote innovation with strong capabilities for flexibly adapting to and coping with changes in an environment characterized by the globalization of business activities and expansion of business domains.

- To be a company that can attract human resources, draw out the individuality, and maximize potential of each and every employee.

- Promotion of diversity management initiatives to enhance the competitiveness of the Mitsui & Co. global group.

- Creation of a corporate culture and rethinking awareness regarding the value of diversity and individuality.

- Sharing the management philosophy and reviewing them on a continuing basis.

- Obtaining personnel from a broad pool of human resources.

- Rebuilding the organization by training and using a diversity of personnel.

- Creating systems that support diversity and reviewing them on a continuing basis.

- Creating a corporate culture that supports diversity and individuality.

Percentage of employees feeling motivated in their work: 72.6% (up 1.9% YoY)

Percentage of employees feeling personal growth through work: 75.1% (up 1.6% YoY)

Percentage of employees feeling proud to be working for the company: 85.1% (up 1.0% YoY)

Sustainability Report 2018
Corporate Governance & Human Resources
Checking year-on-year changes has been useful for proposing and reviewing various initiatives and policies. Since we held the first employee opinion survey in October 2015, we have held the survey regularly in the autumn every year. The survey helps us to identify how employees feel about their work environment and our company’s working conditions. In turn, this enables us to propose and implement various measures to improve working conditions.

**PDCA Cycle Based on Employee Opinion Survey on Work Styles**

After holding the first survey in October 2015, it became clear that we faced two issues on a company-wide basis: improving efficiency in terms of working places and working hours; and increasing business process efficiency. To tackle the first of these issues, we implemented the following company-wide systems: annual paid leave on an hourly basis (April 2016); mobile work (includes working from home, etc.) (June 2016); and individual-based staggered working hours (June 2017). For the second of these issues, we implemented the following company-wide systems: annual paid leave on an hourly basis (April 2016); mobile work (includes working from home, etc.) (June 2016); and individual-based staggered working hours (June 2017). For the second of these issues, we implemented the following company-wide systems: annual paid leave on an hourly basis (April 2016); mobile work (includes working from home, etc.) (June 2016); and individual-based staggered working hours (June 2017). For the second of these issues, we implemented the following company-wide systems: annual paid leave on an hourly basis (April 2016); mobile work (includes working from home, etc.) (June 2016); and individual-based staggered working hours (June 2017). For the second of these issues, we implemented the following company-wide systems: annual paid leave on an hourly basis (April 2016); mobile work (includes working from home, etc.) (June 2016); and individual-based staggered working hours (June 2017). For the second of these issues, we implemented the following company-wide systems: annual paid leave on an hourly basis (April 2016); mobile work (includes working from home, etc.) (June 2016); and individual-based staggered working hours (June 2017). For the second of these issues, we implemented the following company-wide systems: annual paid leave on an hourly basis (April 2016); mobile work (includes working from home, etc.) (June 2016); and individual-based staggered working hours (June 2017).

**Improvement activities in each unit and division**

1. Designing of improvement measures in each unit and division
2. Improvement cycle in each unit and division
3. Employee opinion surveys on work styles
4. Monitoring

**Developing measures at company level**

1. Implementation of company-wide measures
2. Improvement cycle at company level
3. Designing of company-wide measures

**Development of company-wide policies (right circle in cycle diagram)**

- **Annual paid leave on an hourly basis**
  - From April 2016
  - Employees can choose to take hourly-based paid leave up to the accumulated number of such hours equivalent to 5 days per fiscal year as part of their annual paid leave. For nursing care for children and family leave, employees can take leave (ranging from one hour to 10 days of paid leave per fiscal year).
  - Effect and aims: Being able to take leave for just the hours needed allows employees to better concentrate on their work. Just under 80% of employees used this system in fiscal year ended March 2017.

- **Mobile work**
  - From June 2016
  - Employees are permitted to work outside the company (including at home) by taking their company computer with them after regular working hours, or to use their time during their free time when making customer visits.
  - Effect and aims: By eliminating unproductive time, such as unnecessary travel time, employees can work with high levels of efficiency and productivity. Just under 70% of users of this scheme felt there was an improvement in efficiency and productivity in their work.

- **Individual-based staggered working hours**
  - From June 2017
  - While maintaining the prescribed daily working hours, employees can individually choose on a daily basis to start working any time between 90 minutes before and 90 minutes after the normal work starting time.
  - Effect and aims: By urging each individual employee to seriously consider the working hours that maximize not only their own performance, but also that of the organization, we aim to develop organizational units that achieve the best performance, while working with a healthy sense of intensity. In a survey carried out after introduction, 95% of respondents reported that the measures have contributed to the competitiveness of the company (based on the results of a survey into staggered working hours carried out in February 2018).

- **Mitsui & Co.’s teleworking (includes working from home, etc.)**
  - From July to September 2017 (trial for around 800 employees)
  - This system has expanded the scope of employees eligible for the mobile work described above (by adding the option of working from home or a satellite office during regular working hours).
  - Ethical principles for teleworking have been established.

**Survey 2015 “Employee opinion survey on work styles” from October 2015**

- Employee choices in terms of teleworking paid leave up to the accumulated number of such hours equivalent to 5 days per fiscal year as part of their annual paid leave.

- **Survey 2016 “Mobile work scheme” from June 2016**

- Employees are permitted to take their company computers with them after regular working hours or on other visits to work outside the company (including at home). By eliminating unproductive time, such as unnecessary travel time, employees can work with high levels of efficiency and productivity.

- **Survey 2017 “Individual-based staggered working hours” from June 2017**

- While maintaining the prescribed daily working hours, employees can individually choose their working hours on daily basis for 10 options starting at each individual’s work starting time. The company is committed to improving its corporate competitiveness, which is one of the goals of Mitsui & Co.’s Work Style Innovation.
Improvement activities (left circle in cycle diagram②) at the business units and divisions (business frontlines)

As part of the employee opinion survey on work styles that we implement every year, we carry out a detailed analysis of the survey results in an organizational basis. Specifically, we provide feedback in the form of tailored analyses given to 118 divisions. This allows them to identify characteristics at each organization by comparing against the company average or division average, etc. Furthermore, each organization formulates a unique improvements plan every year in consideration of the characteristics of its business, based on the results of the feedback.

Since October 2016, which was during the second year of the work style innovation initiatives, we have made concerted efforts to link measures across the company. This has led to even greater urgency in the implementation of measures in the workplace. Particularly successful measures have been posted on the “Work Style Innovation” intranet page as examples of best practice, and we have encouraged knowledge of these examples to be shared across the company (see below for some examples).

Introductions of standing conference desks (Infrastructure Projects Business Unit)

The aim of introducing standing conference desks is to create a place where employees can carry out face-to-face communication and hold relaxed, highly efficient and productive meetings. The measure has received good feedback from the employees overall, with some expressing the opinion that it increases awareness among employees who tend to talk too long of the need to hold meetings efficiently, and that this has made meetings easier.

Nomad* desks (Legal Division)

“Nomad desks” have been installed at the Legal Div. separately from the employees’ own desks. The Nomad desks have law books, displays, telephone headsets, and partitions. This gives the employees a space to concentrate fully on examining contracts or talking on Skype, etc. when they need to.

*The Nomad system is a new way of working that uses IT tools, etc. to allow employees to work remotely, for example when working from home or traveling. This gives the employees a space to concentrate fully on examining contracts or talking on Skype, etc. when they need to.

We have also promoted measures to improve the efficiency and productivity at each business unit by working together as a company in close collaboration between the business units, corporate staff divisions, and the business supporting unit to improve business processes in the workplace, and in doing so create time to go on the business offensives. One example of this is the business units making a business process improvements request to the corporate staff divisions when they formulate their own unique improvements plans. The division in question then considers solutions in response to each request.

The impact of these activities (1. Developing measure at company level, and 2. Improvement activities in each business units and divisions) is gradually becoming apparent. In the third survey, which was held in October 2017, improvements were seen for many of the question items. In particular, there were major year-on-year improvements in the results for questions that asked about progress in improvement activities at the business units and divisions (business frontlines).

We will continue to promote PDCA on kaizen activities for improving productivity, based on the results of the surveys. In addition to accelerating work style innovation, including the evaluation of further detailed measures that will contribute to Mitsui’s corporate competitiveness, we will tackle Work Style Innovation across the entire Mitsui & Co. global group by actively exchanging information on best practice between group companies.

Work Style Innovation Action Plans (KPI and action plan formulation for Work Style Innovation at Mitsui)

We have set out KPI and formulated action plans for “Work Style Innovation” from the following three perspectives: 1. Correcting the problem of long working hours; 2. Encouraging employees to take annual paid leave; and 3. Promoting flexible ways of working. We have posted these on the Keidanren website as “Work Style Reform Action Plan”

1. Correcting the problem of long working hours (KPI)

As the result of every employee pursuing higher productivity and efficiency through heightened concentration on their work, by the fiscal year ending March 2020 increase to 70% the average paid leave usage ratio for annual leave (including taking of half-day and hourly leave).

2. Encouraging employees to take annual paid leave (KPI)

As the result of every employee pursuing higher productivity and efficiency through heightened concentration on their work, by fiscal year ending March 2020 increase to 70% the average paid leave usage ratio for annual leave (including taking of half-day and hourly leave).

3. Promoting flexible ways of working (KPI)

By the fiscal year ending March 2020, increase the percentage of employees replying positively to questions in internal surveys regarding the achievement of heightened concentration on their work to at least 70% of all employees.

By the fiscal year ending March 2020, increase the percentage of employees replying positively to questions in internal surveys asking if they feel “motivated in their work”, “personal growth”, and “satisfaction with their choice of company” to at least 80% of all employees.

Previous Work Style Innovation Action Plans

We have also promoted measures to improve the efficiency and productivity at each business unit by working together as a company in close collaboration between the business units, corporate staff divisions, and the business supporting unit to improve business processes in the workplace, and in doing so create time to go on the business offensives. One example of this is the business units making a business process improvements request to the corporate staff divisions when they formulate their own unique improvements plans. The division in question then considers solutions in response to each request.

The impact of these activities (1. Developing measure at company level, and 2. Improvement activities in each business units and divisions) is gradually becoming apparent. In the third survey, which was held in October 2017, improvements were seen for many of the question items. In particular, there were major year-on-year improvements in the results for questions that asked about progress in improvement activities at the business units and divisions (business frontlines).

We will continue to promote PDCA on kaizen activities for improving productivity, based on the results of the surveys. In addition to accelerating work style innovation, including the evaluation of further detailed measures that will contribute to Mitsui’s corporate competitiveness, we will tackle Work Style Innovation across the entire Mitsui & Co. global group by actively exchanging information on best practice between group companies.

Promoting Diversity Management

Career Development for Diverse Human Resources

A diverse range of human resources are working at Mitsui & Co., with different genders and nationalities, as well as different values, ways of thinking, and lifestyles. Mitsui is aiming to create workplaces where employees with a diverse range of backgrounds are able to recognize each other’s unique value, stimulate each other to display their potential to the full, and move on to the next level. To this end, we are developing systems and support measures that will allow them to exert their capabilities to the full, while fostering an atmosphere and culture that realize diversity and inclusion in a way that accepts and respects our diverse characteristics.

Career Development Initiatives for Female

As one of our key initiatives to promote the careers of diverse human resources at Mitsui, we have been promoting human resources development, environment improvements, and mindset changes to support female staff members (business staff and administrative staff) in building and continuing their careers.

Action Plans Related to Career Development Initiative for Female

Mitsui & Co. has formulated the following action plans to promote women’s empowerment and is implementing related initiatives. Our goal of “more than tripling the number of female staff at managerial positions as of June 2014 (67) by around 2020”, which was described in both the following plans, was achieved two years earlier than planned in July 2018 (221 female managerial staff).

Voluntary Action Plan on Promotion of Women to Managerial and Board Position

Our voluntary action plan was posted on the Keidanren website in December 2014.

As of July 1, 2018, Mitsui & Co. has 3 female officers (2 Directors and 1 Audit & Supervisory Board Members) and the ratio of female staff to the total number of officers is 15.7%.

Action Plan Related to the Promotion of Women’s Empowerment (April 1, 2016 to March 31, 2021)

The plan describes our targets up to the end of FY 2020 under the Act on Promotion of Women’s Participation and Advancement in the Workplace.

Diversity Cafe

Along with changes in the social milieu, such as a greater diversity in people’s sense of values, the rising number of dual income households where husbands and wives both hold jobs, and the demographic aging of the population, there has been an increase in the number of employees seeking new kinds of career paths and wanting to maintain a balance between their work and private lives. We host the Diversity Cafe to allow employees of all ages and roles to come together and have the opportunity to learn from each other’s experiences and to discuss and share information on matters of common interest. Since 2009, panel discussions and talks have been held on a variety of themes, such as “How to Manage a Career, and Married Life, Childbirth, and/or Childcare”, “Get-together with Female Directors for Female Managerial Staff”, and “Administrative Staff’s Experiences as Overseas Trainees”.

Work-life Management

Mitsui supports “work-life management” so that every employee is able to fully meet life responsibilities, while pursuing their career development by displaying his or her potential in the workplace to the full. As part of these efforts, we have introduced various systems above the required statutory standards to support our employees in both work and childcare/family care. These systems are made available not just for female employees but also for male employees, encouraging male employees to take part in childcare and family care.
Pre-leave and Pre-return Consultations (Childcare/Family Care)
Pre-leave consultations are offered to all employees planning to take childcare or family care leave, and pre-return consultations are held for all employees planning to return to work after a period of leave. At the pre-return consultation, a three-party meeting is held between the employee, his or her supervisor, and a staff member from the Human Resources & General Affairs Div., supporting the employee to build his or her career in the medium to long term while ensuring work-life management even after returning to work. At pre-consultations for employees on childcare leave, we have begun inviting both the employee's spouse and supervisor to the meeting. There is a growing trend where both partners pursue their careers, and we provide advice to the employee and spouse to improve understanding of the various work-life support systems and to assist in career-building, while raising the supervisor's awareness of the importance of continuing to carry out thorough communication; have high expectations of the employee, give him/her opportunities, and support their growth. Through these initiatives, we are working to create an environment that provides support for future career-building and work-life management.

Utilization of Work Style Innovations Systems (Childcare/Family Care)
The staggered working hours system for childcare and family care was previously only available to employees involved directly in childcare or family care. In 2017, as part of our Work Style Innovations, we included this system in the individual-based staggered working hours scheme, which is applicable to all employees (only staff working in Japan, and excluding secondees). At the same time, we made it possible to use this scheme and the childcare and family care working hours system in a combined manner. Furthermore, we also started to offer a variety of choices for flexible work styles, including annual paid leave on an hourly basis, and the opportunity to acquire nursing care leave and family care leave in hourly units. By introducing such various systems, we are developing an environment in which even employees with time restrictions can display their maximum performance in a more efficient way.

Measures Supporting Work Alongside Childcare
In addition to our previous measures to support employees to smoothly return to work, including conclusion of contracts with external childcare facilities near to our offices in order to secure places for our employees and provision of subsidies to cover part of the costs for babysitters, since fiscal 2017 we have begun to subsidize part of the costs of childcare and extended childcare costs for employees who return to work early from childcare leave. While respecting the best work-life management for each individual employee, we are developing various support measures.

Measures Supporting Work Alongside Family Care
To help employees prepare for a sudden need to give family care, we have published a Handbook for Assisting Work Alongside Family Care, and are also holding explanatory sessions on family care systems and family care seminars, providing relevant information to support employees. Furthermore, we have concluded a contract with an external NPO to allow our employees to consult family care experts at an early stage. In addition, for employees who do not meet the criteria for obtaining family care leave despite having a family member who has a disability and needs a certain level of assistance, we have established a special support leave system.

*After taking the long-term medical leave, employees shall be able to apply to the use of his/her long-term medical leave.
As a result of implementing a series of measures to promote work-life management, Mitsui has been recognized three times (in fiscal years ended March 2009, 2012, and 2016) by Japan’s Ministry of Health, Labour and Welfare as a company that is actively providing childcare support to help our employees care for children, and has acquired the next generation certification logo (Kurumin). We will continue to formulate and promote action plans (5th period - April 2017 to March 2019) under the Act on Advancement of Measures to Support Raising Next-Generation Children.

The “Kurumin” logo may be placed on the products of businesses that have been officially recognized by Japan’s Ministry of Health, Labour and Welfare as actively providing childcare support. The logo shows an infant safe and sound, wrapped in a protective blanket, which represents the concern and care of the workplace and society.

A re-employment system was introduced in 2007 that enables employees who had to resign from Mitsui due to the transfer of their spouse to become re-employed. In order for such an employee to work for Mitsui in the future, the Human Resources & General Affairs Div. provides consultation for the employee before his or her resignation, so that the employee may consider relevant matters such as how they might spend their time after their resignation.

While views about LGBT vary from country to country, Mitsui believes that gaining a proper understanding of LGBT is an important part of building relationships of trust with the people we meet in our work. Accordingly, we have implemented measures such as holding internal seminars in Japan and posting the LGBT Guidebook on the intranet. In addition, we cover the topic of LGBT as part of Overseas Pre-posting Training for employees being posted overseas, supporting employees’ understanding before their posting. In terms of facilities, multi-purpose restrooms have been installed in the Tokyo Head Offices.

Mitsui & Co. action plans under the Act on Advancement of Measures to Support Raising Next-Generation Children (5th Period – April 2017 to March 2019) (Japanese only)

Employees Taking Childcare or Family Care Support (Non-consolidated)

Re-employment System for Employees Who Had to Resign Due to the Transfer of Their Spouse

Support for Employees Who Are Citizens of Countries Other Than Japan

The Mitsui & Co. global group has excellent human resources of a variety of nationalities and in different countries around the world, and promotes their active role in developing business closely connected with local regions. In order to boost global group management, Mitsui receives employees from its group companies on job transfers and training, and supports human resources development and the establishment of human networks within the group. Moreover, Mitsui has built a support framework for employees who are citizens of countries other than Japan to work in Japan smoothly, including establishment of a mentor system that aims to provide comprehensive support for the career development and independence of such employees hired by the Tokyo Headquarters, and provision of support for administrative procedures, such as updating or changing visa status.
Supporting the Active Participation of Senior Personnel

We have established a unit within the Human Resources and General Affairs Division fully dedicated to supporting our senior personnel. We provide various training opportunities, such as Career Design Training, as well as holding individual interviews to support senior personnel aged over 50 to actively engage in business, etc. and to independently design their own career development path.

Mitsui has introduced a ‘re-employment system’ that provides employees who wish to continue working after reaching the mandatory retirement age of 60 the opportunity to continue working up to the maximum age of 65. We strive to build an environment that enables active participation of senior personnel by continuing to make use of their work experience, knowledge, and skills even after reaching the mandatory retirement age.

Furthermore, we provide support to employees for their new careers outside the company, in line with their choice of career paths.

Initiatives to support the careers of senior employees so as to play active roles within and outside the company

Provision of Information
- Senior interviews: Individual interviews for employees aged 50 and above who want to have an interview. Information and advice are provided on various individual themes, such as the employee's future career, the company's retirement benefits and pension system, the re-employment system, current conditions in the rehiring market for senior employees, and planning and preparation for life after retirement. (Approximately 200 interviews are held per year.)
- Re-employment system explanation meeting: The meeting is held to explain the system to employees seven months before mandatory retirement age. (Held four times per year for a total of approximately 120 employees.)
- Interview to confirm intentions regarding re-employment: Interviews are given to employees who did not attend the re-employment system explanation meeting or any other employees who wish to attend.

Training
- Career design training: Two-day overnight training held twice in total for business staff aged 48 to 51 and 54 to 58. Participants think about both public systems and internal systems, carry out a stock-taking of their values, strengths and weaknesses, and think about choices of working style. (Held 11 times in FY 2017, with 244 participants.)
- Career Design Follow-up Training: An evening course for employees who have already received career design training and would like follow-up training. (Held 4 times in FY 2017, with 90 participants.)
- Life plan training: One-day training program for administrative staff aged 50 and above. (Held 2 times in FY 2017, for 62 participants.)

Support for active participation within the company
- Discussions are held by the Re-employment Committee, which is composed of executive officers and division G&O leaders, about the specific activities of each senior employee. Support will be given for a diverse range of opportunities both in Japan and at overseas offices and affiliated companies.
- We have developed the Overseas Fringe Benefits System to support overseas activities. (As of March 31, 2018, there were 113 re-employment contract employees (including 12 employees working overseas).

Support for activities outside the company
- The retiree support system is for employees aged 50 and above who wish to look for re-employment outside the company. We provide support to job-seeking employees through companies specializing in that area, and we are posting re-employment information via the intranet.

Hiring of disabled persons

In 1981, in accordance with the then Law for the Employment Promotion of the Disabled, we established Mitsui Bussan Business Partners Co., Ltd. (formerly Bussan Service Co., Ltd.), a trailblazing special-purpose subsidiary for the employment of people with disabilities. A large number of disabled persons are currently employed and posted in accordance with the “normalization” policy, co-working with non-handicapped persons in a variety of personnel and administrative capacities including printing, mailing, various kinds of data processing, business travel arrangement and settlement, personnel, payroll and benefits administration and office layout management. Employees with disabilities represented 2.74% of our workforce as of June 2018. For over 20 years we have exceeded the statutory employment rate for people with disabilities.

We will continue to promote hiring disabled persons with the objective to exceed the legally mandated level.

Occupational Health, Safety and Work Environment Initiatives

Policy

The Mitsui & Co. global group aims to develop safe, healthy working environments in which every individual employee can work with peace of mind. We see this as essential to enabling each employee to work at his or her full potential, and to continuing strengthening the competitiveness of the entire Mitsui & Co. global group. In addition to statutory measures required by laws and regulations, we have established structures to ensure that we properly respond to emergency situations, such as accidents and disasters. We also implement various health management and promotion measures to energize our working environments.

Health Declaration

Policy

Recognizing that good health of employees is Mitsui & Co.'s great asset, we formulated the Health Declaration below.

Health Declaration

September, 2017

Employees are irreplaceable assets for Mitsui & Co. We regard health management for our valued employees as a vital management priority, and we will implement the following initiatives with the aim of helping our employees to maintain and improve their health.

1. We will create safe and comfortable workplaces in which employees can work energetically and in good health.
2. We will help our employees to work in the spirit of “challenge and innovation” by supporting their health management and sustainably enhance our corporate value.
3. We will help employees to raise their awareness of the need to maintain their own health and to take the initiative in maintaining and improving their mental and physical health.

Tatsuo Yasunaga

Representative Director

President and Chief Executive Officer

Mitsui & Co., Ltd.
Health Promotion Committee
In February 2017, Mitsui established the Health Promotion Committee under the basic policy of (1) promoting “Health and Productivity Management”, which regards health management as a management priority and (2) maintaining and enhancing the employees’ health through implementation of “Health and Productivity Management” and improving the company’s productivity. The committee meeting is held on a quarterly basis.

As part of our “collaborative health” program, through which we aim to implement effective measures in enhancing employees’ health under a partnership between the health insurance union and the company, Mitsui (members composed of Representative Director & Executive Vice President, the General Manager of Human Resources & General Affairs Division, Health Management Center & Medical Clinic Dept. of Human Resources & General Affairs Division, Industrial physicians and other healthcare professionals) and Mitsui Bussan Health Insurance Society will work together to plan and decide policies aimed at maintaining and enhancing employees’ health, and execute these policies.

Hygiene Committee
The Hygiene Committee consists of people recommended by employees and management, and holds a monthly meeting. The committee discusses ways to improve working environments, ways to develop an appropriate framework, and other related matters based on the advice provided by qualified industrial physicians and hygiene experts.

Topics discussed by the committee include the result of workplace inspections, countermeasures based on those results, regular reports on prolonged overtime hours, as well as regular health and stress checks, and influenza vaccination programs. The committee gathers opinions and works to ensure that they are reflected in employee safety and health measures. It communicates with employees by posting the minutes of its monthly meetings on the intranet.

Employee Health Management
In-House Medical Clinic
We have established a clinic in our Tokyo Head Office and a medical treatment room in the Osaka Office. The clinic in the Tokyo Head Office covers a diverse range of specialist areas, including internal medicine, surgery, ophthalmology, E.N.T. and radiology, and is equipped to provide medical consultations for employees. It also provides comprehensive medical examination and medical check-ups for employees who are about to travel overseas or have returned from overseas assignments, as well as inoculations. Consultant physicians are assigned to each domestic office in Japan to provide health management for employees working in those locations.

Medical Examinations
We provide multiple in-house medical examination opportunities at regular intervals, and employees are able to view the results of their own examinations on the intranet. Mitsui and the Mitsui Bussan Health Insurance Society are also working collaboratively toward the prevention and early detection of lifestyle diseases and other conditions, and the provision of enhanced health advisory services, through the formulation and implementation of the following measures.

- Provision of opportunities for employees aged 35 and older to undergo comprehensive health examinations at external medical institutions
- Provision of subsidies for employees aged 35 and older who undergo brain checkups, lung cancer screening, gastrointestinal examinations, and colorectal cancer screening
- Provision of specific health advisory services for employees aged 40 and older
- Provision of subsidies for cervical cancer screening for female employees aged 34 and younger
- Provision of subsidies for breast cancer and uterine cancer screening for female employees aged 35 and older

Health Advice/Health Maintenance and Promotion Measures
Measures to help employees avoid lifestyle diseases and metabolic syndrome include dietary advice from registered dieticians, and weight loss support through health advice for employees aged 39 and younger. Welfare system options also include a service that allows employees to use external fitness gyms at corporate rates. In addition, trainers visit workplaces during working hours to run weekly eight-minute stretching and exercise sessions under the “Round Refresh” system. Employees engage in light exercise routines while standing by their desks. The benefits include not only full-body relaxation, and the relief of shoulder stiffness and lower back pain, but also the restoration of concentration and creativity, and mood improvement through communication with colleagues. The exercises provide both mental and physical relaxation and contribute to stress management.

As part of enhanced support for female employees, we have established advisory services relating to female and maternal health, offering private consultations with female doctors. Useful health-related information and guidance on various health advisory services are also provided via the intranet.
Health Management for Employees Working Overseas
We regard health management for employees working overseas and their families as an important priority and has established systems to ensure that advice is available at any time if employees or family members suffer physical or mental illness.

Vaccinations and health checks are provided for employees assigned overseas and their families. They also receive overseas health management training covering physical and mental health and other aspects, as well as information about how to obtain medical information and access support systems while overseas. We also provide health management support for employees working overseas and their families in partnership with emergency medical service contractors.

Countermeasures Against Infectious Diseases
Every year, we provide influenza vaccinations for the approximately 2,000 employees who request this service. Measures to prevent or contain infections include the provision of mouthwash and hand sanitizers in every workplace. In addition, we thoroughly send employees educational information about the prevention of tuberculosis, malaria, AIDS, and dengue fever. Information about infectious diseases is obtained through independent overseas medical assistance companies, and supporting systems are in place to ensure a rapid response in cooperation with public health centers, Security Management Department, in-house clinics, industrial health staff, and workplace units.

Subsidy Schemes

Medical Support System (Mutual Aid Association)
This system supports association members and their families with the medical expenses that are not covered by insurance in the event of illness or injury.

Smoking Cessation Treatment Subsidy Program
Provided in collaboration with the Mitsui Bussan Health Insurance Society, this program is designed to prevent cancer and lifestyle diseases through the provision of subsidies to employees who have successfully quit smoking through smoking cessation treatments that are eligible for health insurance cover.

Influenza Vaccination Subsidies
In collaboration with the Mitsui Bussan Health Insurance Society, we subsidize the cost of vaccinating children aged 13 and younger against influenza, which is regarded as having a high infection rate and the potential to have serious effects.

Mental Health Promotion Plan (formulated on May 1, 2016)
Mitsui recognizes that the mental health of its employees is an important priority issue in order to promote happy lives for its employees and their family members, to increase productivity at the company, and to develop lively workplaces. Accordingly, we will promote mental health initiatives, not only in terms of dealing with mental health problems, but also in a broader sense, including measures to revitalize workplace communication, etc.

We have set the following targets to be achieved in the five-year period to FY March 2020:
1. All employees, including managers, shall understand mental health issues, and become able to fill his or her own role in promoting mental health.
2. Fully establish and permeate the stress check system.
3. Achieve a ratio of 100% of employees undergoing regular health consultations.

Under Mitsui's Mental Health Promotion Plan, employees are able to obtain advice easily and at any time via a dedicated consultation service. Through consultations with health nurses and industrial physicians, employees can receive support that meets their individual needs. Employees also have access to counseling by specialists at the company clinic. In addition, we have established external advice lines through which not only employees, but also their families can seek advice anonymously via telephone and email, or arrange consultations.

Even when an employee takes temporary absence from work, industrial physicians and health nurses continue to provide fine-tuned care. To ensure that employees can feel confident about returning to work, they go through a preparatory process that includes multiple interviews. After their return to work, they receive follow-up care, including health monitoring and measures to prevent recurrences, based on collaboration among industrial physicians, health nurses, company doctors, and other personnel.

Mitsui also implements stress checks. In addition, we carry out stress checks with the following aims: (1) measuring the level of employees' stress in order to raise employees' awareness of their own stress levels, (2) linking this to improvements in the workplace environment, and (3) preventing mental health problems (primary prevention).

Health-related Training and Seminars

In addition to mental health training for line managers, as well as training for health management overseas, and health management training for new-graduate employees as they become independent business persons for the first time, we also hold other health-related seminars as part of our efforts to build an organization with a high level of health literacy.

Healthy Working Environment

We implement the following measures to develop a safe working environment for employees.

<table>
<thead>
<tr>
<th>Initiatives for safe working environment</th>
<th>Description of Initiatives</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ergonomic workplace</td>
<td>• We aim to improve operating productivity in the HQ office by applying universal design principles and a back-to-back desk layout system, in order to stimulate communication within the organization, while also allowing seating positions to be changed flexibly. • Twice a month, industrial physicians, health nurses, and other medical personnel visit each workplace to examine whether a safe working environment for employees is maintained, and to identify and respond to safety and health problems in order to ensure a healthy work environment.</td>
</tr>
<tr>
<td>Illumination</td>
<td>• We have installed illuminance sensors, which automatically detect motion and provide constant brightness control at the target illuminance level (750 lux). To reduce power consumption, window blinds are automatically controlled according to the intensity and angle of sunlight.</td>
</tr>
<tr>
<td>Noise</td>
<td>• External noise has been reduced significantly through the use of multiple-glazing in the building's windows. Walls in visitor meeting rooms have soundproof structures that prevent sound from being audible outside of the rooms.</td>
</tr>
<tr>
<td>Indoor air quality</td>
<td>• Effective air-conditioning is provided by a system with outside air intakes. This lowers the CO₂ level while reducing the air-conditioning load. The environment within the building is monitored regularly.</td>
</tr>
</tbody>
</table>

The Ministry of Economy, Trade and Industry has introduced a program to recognize corporations that achieve outstanding “health and productivity management” (including large companies and small to medium enterprises). In 2018, Mitsui was recognized under this program as a 2018 Certified Health & Productivity Management Organization.

Working Hours Management

We implement the following measures to ensure appropriate management of working hours.

• Company-wide efforts to raise employees’ awareness of appropriate management of working hours through regular messages from management
• Education activities for employees, including the formulation of the Working Hours Handbook and a manual about attendance management systems, and the compilation of FAQs, to provide clear information about laws, regulations, and corporate systems relating to working hours; the posting of this information on the intranet
• Regular monitoring by the Human Resources & General Affairs Div., using working hours data from attendance management systems, building entry/exit times, and PC usage histories
• Continual compilation and distribution of information about overtime hours worked and annual paid leave taken in each unit
• Training and other occasions to help managers to maintain comprehensive knowledge about proper labor management
• Creation and monitoring of KPIs under the Work Style Innovation Action Plan

In addition, based on the Industrial Safety and Health Law, we urge employees who have worked overtime beyond certain standards to consult with our industrial physicians, and suggest to them measures for preventing health problems and reducing total working hours.
Occupational Safety

Mitsui takes various steps to protect its employees from workplace accidents, including periodical inspections by industrial physicians. We have established mechanisms to ensure that any accidents are reported to the Human Resources & General Affairs Div. When accidents occur at Mitsui or its affiliated companies, we take appropriate action, submit any reports required in accordance with our compliance-related procedures, and strive to prevent recurrences.

Security Management

Mitsui promotes various kinds of businesses through its 137 points of global operations (as of April 1, 2018), and a large number of employees go on a business trip to many parts of the world almost every day. It is one of the most important tasks for the company to ensure the security of employees and families home and abroad.

In cooperation with domestic and foreign offices, and security companies concerned, Mitsui obtains and analyzes the latest situation about politics, the peace and order of each place changing every day, and shares such information with the related staff, in order for the employees to raise awareness of the security.

Mitsui has also prepared the system corresponding to the situations such as accidents, injuries, and diseases, in cooperation with emergency health care service companies. For the employees, as well as families, who will be dispatched to the overseas, the company has the programs for security measures.

Assuming a large-scale disaster, Mitsui regularly performs trainings for Business Continue Plan placing human life as a first priority, and the company makes efforts to raises the crisis response capabilities by solving problems extracted through the training.

Joint Efforts with Labor Unions

Basic Policy
We respect the right to collective bargaining and freedom of association. Mitsui & Co. and the Mitsui Labor Union, which was established in 1962, hold a shared understanding of the societal mission of Mitsui. Both parties respect each other’s positions, and work toward the sound development of the company and society and toward the improvement of the social, economic, and cultural status of union members. Accordingly in May 2015, a union shop agreement was concluded. As of March 31, 2018, the number of union membership stood at 4,709 (86.7% participation ratio).

Discussions with the Labor Union
We share various issues with the labor union and actively engages in discussions, with the aim of creating an environment in which every employee can continue working with energy and motivation and both the employees and company achieve continual growth. In the fiscal year ended March 2018, Mitsui engaged in multi-layered discussions with the union on various levels and on a wide range of topics, including human resource management systems, salaries and bonuses, work style innovation, pension systems, and training. We introduce those systems and measures on the basis of labor-management agreement.

FY 2016
January: Collective bargaining (revisions to human resource management systems)
February: Expanded working team-level negotiations (revisions to compensation systems)
September: Collective bargaining (introduction of the Union’s newly appointed executives)

FY 2017
June: Expanded working team-level negotiations (union proposals for training systems)
September: Collective bargaining (introduction of the Union’s newly appointed executives)

Dialogue between Management Executives/Organization Heads and the Labor Union
We are working to maintain healthy relationships and to deal with various issues through labor-management cooperation. For example, we actively create opportunities within each unit for dialogue with management executives and discussions with organization heads about business overviews and policies, the administration of human resource management systems, and human resource development (16 such meetings in the fiscal year ended March 2018).
Occupational Health, Safety and Work Environment Initiatives

Promoting Internal Communication

With the aim of making Mitsui an even more vibrant, dynamic, and vigorous company, we actively create opportunities for dialogue between the management and employees. For some time, we were regularly holding so-called Active Talk Wednesday (ATW) sessions as employee gatherings, with the aim of stimulating internal communication. In the fiscal year ended March 2018, four seated-style ATW sessions were held for small groups with a focus on stimulating communication between management and employees. Three “buffet-style” ATW sessions were held with the aim of strengthening networking among employees. At the domestic branches and offices, a total of 17 dialogue ATW sessions were held, involving employees from affiliated companies. Furthermore, in the fiscal year ended March 2018, “The Kurumaza” (roundtable meetings), where the president meets with employees for open discussions, was held on 31 occasions at the Tokyo Head Office, 7 times at domestic offices and branches, and 48 times at overseas offices. By sharing management’s thoughts and ideas from a variety of perspectives and bringing together the opinions and thoughts of employees through face-to-face meetings, we will endeavor to create an organization with an atmosphere of openness.

Evaluation by Society

External Recognition

ESG (environmental, social, and governance) investment involves, in addition to conventional financial analyses, the evaluation of corporations from the environmental, social, and governance aspects, whereby the level of fulfillment of corporations’ social responsibilities is regarded as an integral part of investment standards. Our selection for inclusion in major ESG investment indices in and outside Japan indicates that we are highly evaluated by society.

Dow Jones Sustainability Indices
The Dow Jones Sustainability Indices is a global stock index developed jointly by Dow Jones & Company in the U.S. and RobecoSAM AG in Switzerland. Major corporations around the world are evaluated in terms of their economic, environmental, and social performance. In 2017, 326 companies (which included 31 Japanese companies) were selected for the World Index and 152 companies (which included 72 Japanese companies) were selected for the Asia Pacific Index. Mitsui was selected for both the World Index and Asia Pacific Index in 2017.

RobecoSAM Sustainability Award
RobecoSAM carries out surveys and analyses for the Dow Jones Sustainability Indices. From each industry, it recommends companies that have undertaken environmental, social, and governance initiatives. A total of 478 companies (including 51 Japanese companies) were selected worldwide for the RobecoSAM Sustainability Awards 2018. In the Trading Companies & Distributors category, Mitsui was selected as one of the companies to be ranked Gold Class, which is awarded to companies that are within a 1% range of the score of the industry leaders.

FTSE4Good Index Series
The FTSE4Good Index Series is a stock index developed by FTSE Russell, which is a wholly owned subsidiary of the London Stock Exchange. FTSE Russell evaluates major corporations around the world from the aspects of environmental, social, and governance criteria, including the labor standards applied throughout their supply chains, as well as on the basis of corporate sustainability. It selects companies that satisfy its standards as constituents of the index. Mitsui fulfilled the criteria of the index and was selected in the FTSE4 Good Index Series.

FTSE Blossom Japan Index
The FTSE Blossom Japan Index is designed to measure the performance of Japanese companies that demonstrate strong environmental, social and governance (ESG) practices. The index uses FTSE Russell’s ESG Ratings data model, which draws on existing international ESG standards such as the UN Sustainable Development Goals (SDGs), and is adopted by the Government Pension Investment Fund (GPIF) of Japan as a core ESG benchmark for its passive investments. Mitsui fulfilled the criteria of the index and was selected in the FTSE Blossom Japan Index in 2017.

MSCI Japan Empowering Women Index (WIN)
Developed by Morgan Stanley Capital Investment (MSCI), the MSCI Japan Empowering Women Index is adopted by Government Pension Investment Fund (GPIF) as a tracking benchmark for its passive ESG investment. The index is a selection of Japanese companies from each industry that represent high gender diversity. Mitsui fulfilled the criteria of the index and was selected in for the MSCI Japan Empowering Women Index.

CDP (Carbon Disclosure Project)
CDP is a London-based non-profit organization operated collaboratively by institutional investors. Its purpose is to urge leading companies (in terms of aggregate value) in major countries to disclose their environmental strategies and greenhouse gas emissions. Mitsui has continued to answer the questionnaire since 2012. In 2017, Mitsui was granted the rating “Management Level B”, in relation to both climate change and water inclusion in the 2018 Competitive IT Strategy Company Stock Selection
The Competitive IT Strategy Company Stock Selection is designated by the Ministry of Economy, Trade and Industry and the Tokyo Stock Exchange (TSE) on the basis of outstanding IT utilization initiatives. Key focal points for the assessment process for 2018 included the creation of new business and value through the use of AI, IoT and other latest digital technologies, as well as strategic IT initiatives based on medium- to long-term perspectives targeted at renovating legacy systems. Mitsui has been selected for four years in a row since the launch of the award in 2015.

Nadeshiko Brand
The Nadeshiko Brand is a designation jointly awarded by the Ministry of Economy, Trade and Industry and the Tokyo Stock Exchange (TSE) to companies listed in all TSE sections that have shown excellence in promoting career advancement for women. In the fiscal year ended March 2018, Mitsui was selected as a Nadeshiko Brand company for its proactive efforts to women to play more active roles in the workplace. Including being selected as a Semi-Nadeshiko Brand in the fiscal year ended March 2017, this is the fourth year running that Mitsui has been recognized as a Nadeshiko Brand.

Eruboshi (L Star)
Eruboshi status is awarded to companies that have submitted notifications under the Act on Promotion of Women’s Participation and Advancement in the Workplace (Promotion of Women’s Career Activities Act) promulgated on April 1, 2016. Requirements for certification include the fulfillment of specific standards, and the implementation of outstanding initiatives to promote the advancement of women in the workplace. In September 2016, the Ministry of Health, Labour and Welfare certified Mitsui as having achieved the second of three levels under the Eruboshi system.

Independent Practitioner’s Assurance Report

July 31, 2018

Mr. Tatsuo Yasunaga,
President and Chief Executive Officer,
Mitsui & Co., Ltd.

Masahiko Sugiyama
Representative Director
Deloitte Tohmatsu Sustainability Co., Ltd.
3-3-1, Marunouchi, Chiyoda-ku, Tokyo

We have undertaken a limited assurance engagement of the sustainability information indicated with ★ for the year ended March 31, 2018 (‘‘Proportion of Female Permanent Staff and Managers’’ and ‘‘Proportion of Female and Non-resident Executive Officers’’ as of July 1, 2018) (the ‘‘Sustainability Information’’) included in the ‘‘Sustainability Report 2018’’, and ‘‘Data of Personnel Affairs’’ and ‘‘Environmental Data’’ created for the Company’s webpage of Mitsui & Co., Ltd. (the ‘‘Company’’).

The Company’s Responsibility
The Company is responsible for the preparation of the Sustainability Information in accordance with the calculation and reporting standard adopted by the Company (indicated with the Sustainability Information). Greenhouse gas quantification is subject to inherent uncertainty for reasons such as incomplete scientific knowledge used to determine emissions factors and numerical data needed to combine emissions of different gases.

Our Independence and Quality Control
We have complied with the independence and other ethical requirements of the Code of Ethics for Professional Accountants issued by the International Ethics Standards Board for Accountants, which is founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behavior. We apply International Standard on Quality Control 1, Quality Control for Firms that Perform Audits and Reviews of Financial Statements, and Other Assurance and Related Services Engagements, and accordingly maintain a comprehensive system of quality control including documented policies and procedures regarding compliance with ethical requirements, professional standards and applicable legal and regulatory requirements.

Our Responsibility
Our responsibility is to express a limited assurance conclusion on the Sustainability Information based on the procedures we have performed and the evidence we have obtained. We conducted our limited assurance engagement in accordance with International Standard on Assurance Engagements Other than Audits or Reviews of Historical Financial Information, issued by the International Auditing and Assurance Standards Board (ISAE 3402), Assurance Engagements on Greenhouse Gas Inventories, issued by the ISAE and the Practice Bulletin for Assurance Engagements on Greenhouse Gas Inventories, issued by the Japanese Accountants’ Association and the JAS. We performed the engagement in our professional judgment and included inquiries, observations of procedures performed, inspection of documents, evaluated the appropriateness of quantification methods and reporting policies, and evaluated the reliability of underlying data. The procedures also included testing the data on which the estimates are based. We have obtained sufficient appropriate evidence to provide a basis for our conclusion. We believe that the Company’s methods for estimates are appropriate and had been consistently applied. However, the procedures did not include testing the data on which the estimates are based or reperforming the estimates.

Limited Assurance Conclusion
Based on the procedures we have performed and the evidence we have obtained, nothing has come to our attention that causes us to believe that the Company’s Sustainability Information is not prepared in all material respects, in accordance with the calculation and reporting standard adopted by the Company, and is therefore not materially misstated.

We believe that the Sustainability Information is not materially misstated in all material respects, in accordance with the calculation and reporting standard adopted by the Company.

The above represents a translation, for convenience only, of the original Independent Practitioner’s Assurance report issued in the Japanese language.

Signature of Deloitte Tohmatsu Sustainability Co., Ltd.
